# Manufacturers' Shipments, Inventories, and Orders: 1982-1990

U.S. Department of Commerce  
Economics and Statistics Administration  
BUREAU OF THE CENSUS

---

## Acknowledgments

This report was prepared under the general direction of **John Berry**, Assistant Division Chief for Economic Indicator Programs, and under the general supervision of **Gaylord Worden**, Chief, Industry Division. Within the Industry Division, the preparation of this report was performed under the supervision of **Ruth Runyan**, Chief, Manufacturers' Shipments, Inventories, and Orders Branch, assisted by **Eddie Salyers**, **Kathleen Menth**, and **Gloria Cable**. Other contributing industry analysts include **Doris Kling**, **Mary Green**, **Lee Wentela**, **Sue Munday**, **John Hargrove**, **Charles Funk**, **Indrek Grabbi**, **Henry Haurand**, **Catherine Knudsen**, **Sandra Sollinger** and **Jessica Young**. The assistance of **Marilyn Clark**, **David Cooper**, **Ronald Danna**, **Alice Miller**, **Korrey Blount** and **Denise Bratcher** is also appreciated.

**Lillie M. Skinner** coordinated the various phases of the publication process, assisted by **Enid Winters**.

The electronic computer programs were developed under the direction of **Deborah Tasky**, Chief of Programming, assisted by **Sam Jones**, **Louise Fry**, **Diana Rubin** and **Hung Phan**.

The staff of Administrative and Publications Services Division, **Walter C. Odom**, Chief, performed publication planning, design, composition, editorial review, and printing, planning, and procurement. **Nelsa Brown** and **Frances Scott** provided publication coordination and editing. **David Coontz**, assisted by **Neeland Queen** and **Kevin Proctor**, provided design and graphic services.

Finally, a special acknowledgment is due to the many businesses whose cooperation was essential to the success of this report.

C. Composition of Aggregate Data Series in Terms of M3 Industry Series.....	C-1

D.	Benchmarking Procedure Used in Revising Historical M3 Shipments and Inventory Estimates.....	D-1
E.	Value of Manufacturers' Unfilled Orders Used in Benchmarking Monthly M3 Estimates.....	E-1
F.	Notes on Trading Day Adjustment Methodology and Weight Patterns.....	F-1
G.	Summary Measures for Evaluating the Quality of the Seasonal Adjustment of M3 Series.....	G-1

# Summary of Revisions

## GENERAL

The historical data from the Manufacturers' Shipments, Inventories, and Orders survey have been revised as a result of:

1. Converting the complete time series to the 1987 Standard Industrial Classification (SIC) definitions.
2. Benchmarking the shipments and inventory data to the 1987 census and 1988 Annual Survey of Manufactures (ASM).
3. Adjusting new and unfilled orders to be consistent with the benchmarked shipments and inventory data.
4. Updating the trading day adjustment factors in the shipments series.
5. Updating the seasonal adjustment factors for all series. The results of the first three procedures are summarized for 1982 through 1990 in Table A in the form of annual level and year-to-year percent change revisions. The results of the trading day and seasonal adjustment factor updates are shown in Table B as they affected the more recent month-to-month trends in the seasonally adjusted data.

## SPECIFIC

### Industry Reclassification Revisions

Eleven of the 20 major manufacturing industry groups were revised because of the changes in the industry classifications. The most significant change in terms of value of shipments was in Electronic and Other Electrical Equipment (MG36) and Instruments and Related Products (MG38). Nearly half of the Communications Equipment industry in MG36, about \$34 billion, was reclassified to Search and Navigation Equipment in MG38.

Twenty-one of the 80 M3 industry category data series were affected by SIC changes and were revised back to 1958 to retain data continuity. In addition, 11 other categories were redefined to provide more specific detail in industrial areas whose relative importance has increased significantly or where seasonal adjustment improvements might be expected.

The results of these revisions due to the SIC changes as well as technical notes on the methodology are summarized for the 20 major groups in Appendix D for shipments and inventories and Appendix E for new and unfilled orders. Since data were available on both the 1972 and 1987 SIC basis only from the 1987 census, estimates of the effects on the annual data prior to 1987 were made using previously published information from other Census Bureau industry and product surveys.

### Benchmarking Revisions

Prior to converting the historical data in the survey to the 1987 SIC definitions, data were benchmarked to the 1987 census levels based on the 1972 SIC definitions using a two-stage process. First, the data for 1982 through 1987 which had been previously benchmarked to census and annual survey estimates for 1982 through 1986, were adjusted to 1987 ASM estimates (which are not published). Second, the 1982 through 1987 data were adjusted to the 1987 census levels, distributing the level correction which generally occurs in census years over the 5-year period. This is a change from prior procedures where the correction was confined to the census year, causing a distortion in the trend for the time interval. A more detailed discussion of the current and previous procedure and the purpose of the methodology change is found in the section on Benchmark Procedures on page IX. Technical notes on the benchmark methodology are found in Appendix D for shipments and inventories and Appendix E for new and unfilled orders.

Results of this smoothing procedure for all major 2-digit industries, according to 1972 SIC definitions, are included in the tables in Appendix D and Appendix E. At the total manufacturing level, the revised data in terms of year-to-year percent change are quite close to the year-to-year change estimated in the M3 survey with no benchmarking between censuses. (see Table A.) However, at the major industry group levels, the results are not as reinforcing. Generally, however, most M3 series are revised lower when benchmarked to ASM year data and up significantly in census years.

This implied downward bias in the ASM benchmark levels was statistically quantified in the most recent periodic survey evaluation which was completed and submitted to the Office of Management and Budget

(OMB) in March 1990. Possible reasons for the bias are discussed in greater detail in that report, copies of which are available upon request. These findings were the primary reason for invoking the second stage smoothing procedure.

### **Updating of Trading Day and Seasonal Adjustment Factors**

An evaluation of the trading day adjustment factors and methodology used in developing the monthly M3 survey estimates was recently completed. The recommendations were implemented with this report. This is the first such evaluation since the research which initiated trading day adjustments in 1962. In general, the factors used historically had an insignificant but persistent downward bias due to rounding the average number of trading days per month from 26.09 to 26. In addition to correcting for this problem, each shipments series was separately evaluated and unique factors calculated. Prior to this, all shipments series except three carried the same factors and the same daily weights. Appendix F contains more specific information on the study, daily weights assigned to each series, and diagnostics examined in determining the new weights.

The seasonal adjustment procedure followed in this report is the same as that used in the last benchmark report issued in August 1988 and is described in Appendix G. Fifteen series whose historical data were significantly revised were reexamined for the presence of seasonality using the same procedure followed in 1988 when all series were evaluated. Updated diagnostic information on the characteristics and quality of the seasonal adjustment for all series is found in the tables in Appendix G.

The effects of updating the trading day and seasonal adjustment factors on the month-to-month percent changes for 1990 for the major industry categories and aggregates are shown in Table B. The data indicate a slightly greater volatility in the revised data for those major industries affected by the change in industry definitions. This volatility should diminish as additional observations are added to the calculations.

### **Other Survey Changes Effective with this Report**

Several new series aggregates which focus on a particular subject and are referenced as topical series

replace the previously labeled Supplementary Series. All of the series formerly included under the Supplementary Series caption as Defense and Nondefense Capital Goods, and the Market Category caption are included in the topical series. They are not directly comparable, however, because of changes in the specific categories included in the aggregate and a more refined regrouping and weighting of the M3 industry series into eight market categories rather than six.

In addition, an aggregate on producers' durable equipment (PDE) has been added. It should be noted, however, that this series might not simulate the current dollar version of the data published by the Bureau of Economic Analysis because of differences in the weighting schemes used in aggregating the specific series.

Two other aggregates, one on Health Care Products and Equipment and one on Information Technology Industries (which is also one of the PDE subaggregate series) are presented experimentally to stimulate data users who might have a different focus or interest. We solicit comments on this endeavor as well as suggestions for other series combinations which might increase the utility of the M3 survey data.

### **Data Availability**

In addition to this report, historical data from 1958 through 1990 are available on computer tape through the Data User Services Division of the Census Bureau at a cost of \$175.00. To order, call 301-763-4100. Data on CD-ROM will be available in the near future along with a subscription service for quarterly updates. Call 301-763-2502 to check on the availability of the service and cost determination.

The monthly press releases for the M3 survey are issued around the 17th and 23rd working days of the month following the statistical period covered. These are available on hard copy or via a fax transmission service, both on a subscription fee basis. Call 301-763-2502 for initiating this service. These reports are also available the day of issue through the Department of Commerce's online Economic Bulletin Board (N-8-1) (202-377-3870) and through the Census Bureau's online information service CENDATA. CENDATA is available from Dialog Information Services, INC. (1-800-334-2464) and CompuServe (1-800-848-8199).

## Description of Survey

The Manufacturers' Shipments, Inventories, and Orders, (M3) survey, provides broadbased monthly statistical data on economic conditions in the domestic manufacturing sector. It is designed to measure current industrial activity and to provide an indication of future business trends. The data are used extensively by the Executive Branch of the Government in developing economic, fiscal, and monetary policy; by the Bureau of Economic Analysis as components of the gross national product estimates; and by trade associations, corporate economists, and other members of the business community as an analytical tool in their assessment of the current and future economic condition of the country.

### COMPOSITION OF INDUSTRY CATEGORIES

There are 80 industry categories for which estimates are separately tabulated in the M3 survey. These categories are groupings of the 459 manufacturing industries as defined in the 1987 Standard Industrial Classification (SIC) Manual.<sup>1</sup> These categories are listed in Appendix B.

Reporting in many of these 80 categories is not sufficient to warrant separate publication of the data. Quality of the data in the specific categories is further limited by consolidated reporting by some large companies. A company which reports on a consolidated basis (either the entire company or a division) is included only in the M3 category in which the reporting unit as a whole is classified and has no influence on the movement of the other industries included in the combined report.

As a result, it has been necessary to combine the 80 industry categories into 45 publication levels for shipments and total inventories. For new and unfilled orders, and inventories by stage of fabrication, it has been necessary to introduce further combinations because of the lower response rates for those items.

### COMPOSITION OF THE SURVEY PANEL

The monthly M3 estimates are based on information obtained from most manufacturing companies with \$500 million or more in annual shipments. Selected smaller

companies are included to strengthen the sample coverage in individual industry categories. These companies are identified from the quinquennial censuses of manufactures and/or interim annual surveys of manufactures.

For firms that operate in a single M3 industry category, the reporting unit typically comprises all operations of the company. Most large, diversified companies, however, file separate reports for divisions with significant activity in different industrial areas.

Each company or reporting unit of a company in the survey is usually comprised of more than one plant or establishment, and frequently includes industry activities outside the M3 category in which it is classified. The survey methodology described later in this chapter assumes that the month-to-month changes of the total operations of the reporting units classified in each industry category effectively represent the month-to-month movements of all establishments classified in the most recent census in the 4-digit SIC industries which make up the category.

The sample for this survey was initially selected in 1962 and included all companies with more than 1,000 employees. Smaller companies were sampled proportional to their employment size. Because of poor response rates, reporting by companies with less than 100 employees was discontinued in 1963, and instead, data for these companies were estimated by using overall industry averages based on data reported by the larger companies.

There was also some deterioration in response rates for companies with between 100 and 1,000 employees. Therefore, in January 1975, a supplemental sample of approximately 1,000 companies was selected from the universe of companies in this size range in order to strengthen the estimates. Although the response rate was only about 60 percent for this group, reports from responding companies are included in the monthly estimates beginning with January 1978.

In recent years, efforts to increase response rates have been based on the size of the value of shipments of the company or reporting unit rather than the employment size. Using this criterion, large companies that do not report in the survey were visited or otherwise contacted requesting that they participate or that they reconsider a previous decision not to participate. Large companies with diversified manufacturing activities that

<sup>1</sup>The SIC, as developed in the Office of Management Budget by the Technical Committee on Industrial Classification, classifies establishments to the 4-digit industry level by principal type of activity therein engaged.

already report in the survey were requested to submit data for industry categories not previously reported.

Letters are sent on an ongoing basis to companies in industry categories with low response rates, soliciting their participation. Also, a probability sample was selected and mailed to about 400 mid-sized companies in the plastics industry. The purpose was to test the viability of probability sampling, especially in industries comprised primarily of smaller, less diversified companies.

All of these efforts to increase response result in the addition to the panel of about 45 to 55 percent of the companies contacted. However, these increases are frequently offset by respondent dropouts. The current coverage levels in the survey show that approximately 50 percent of the shipments estimates at the total manufacturing level are based on reported data, while the individual coverage rates for the twenty 2-digit major SIC industries vary from about 20 to 99 percent.

## LIMITATIONS OF THE DATA

The monthly data presented in this publication are subject to both sampling and nonsampling errors. Sampling errors occur because reports are received from a sample rather than from the complete universe of manufacturing companies. Because the present composition of the panel is not based on a probability sample, the amount of sampling error cannot be quantified. Nonsampling errors, on the other hand, are attributable to many sources. The use of company or divisional reports to estimate the monthly change for establishments is one source of nonsampling error. The use primarily of large companies to represent the month-to-month movement of all companies is another potential source. In addition, response and processing errors may be present, although most of the significant errors of this kind are detected through computer edits of the data prior to tabulation and through analytical review of the data.

## MONTHLY ESTIMATION PROCEDURE

The monthly universe estimates of shipments, unfilled orders and total inventories are derived for each industry category using a link relative procedure. The universe estimate for the previous month is multiplied by the monthly ratio of change tabulated for reporting companies in the current month to arrive at a universe estimate for the current month.

When an individual company reports unusually large changes from the previous month, or when a particular company has unique data patterns differing substantially from the movement shown by the rest of the reporting panel, the company is excluded from the ratio of change calculation but included in the universe

estimate of level. The effect of this procedure is to restrict the estimation for nonrespondents and firms not in the survey panel to the general trend of the industry.

The universe estimate of new orders is derived from the monthly estimate of shipments plus the change in unfilled orders between the current and prior period. The estimate includes orders that are received and filled in the same month as well as orders that have not yet been filled. Also included are the effects of cancellations and modifications of previously reported orders.

The standard ratio estimate procedure is not followed for new orders because not all companies report new orders, and some that do report this item limit their reporting to specific products for which long lead times are required in the production cycle. These companies, in effect, exclude new orders received for products that are shipped from inventory.

A modified procedure also is used to estimate the stage of fabrication inventory data. In this procedure, the total inventory data estimated for each tabulated industry category are cumulated to the appropriate 2-digit SIC major group levels and serve as control totals for the stage of fabrication data. Initial estimates are made for each of the stages of fabrication at the 2-digit SIC level using the ratio estimation procedure. The differences between the sum of the stage of fabrication detail and total inventories at the 2-digit SIC level are then allocated proportionally to the stage of fabrication figures to form the estimates. This procedure is followed because a significant number of companies that report total inventories cannot report inventories by stage of fabrication.

## Trading Day Adjustment

Variations in the rate of manufacturing activity resulting from different numbers of trading days in the same month for different years and variations in the length of months can be an important cause of month-to-month fluctuations in the shipments data. For many industries, these irregularities can be approximately identified and removed so that the underlying trend cycle stands out more clearly.

The trading day adjustment procedure followed in the M3 survey has been modified effective with this report. The previous methodology was based on research completed in 1962. At that time, it was determined that all shipments categories, except for tobacco products, pulp and paperboard mills, and newspapers, periodicals and books, would use the same set of weights for the days of the week, that is, equal weights for Monday through Friday and half weights for Saturday and Sunday. This pattern averages 26.09 trading days per month and resulted in a lower irregular component when the data were seasonally adjusted.

Recent software and data processing improvements have facilitated research and implementation of unique trading day adjustment factors for each series. These improvements include refinements to the trading day analysis in the X-11 seasonal adjustment program,<sup>2</sup> additions to diagnostic software,<sup>3</sup> which identifies progressively unstable data patterns and redesign of the monthly survey data processing system.

Most of the shipments series have trading day factors calculated in the trading day regression analysis routine in the X11 software. However, six of the shipment series did not have identifiable trading day patterns and are only being adjusted for length of month variations. Seven other series are retaining the weights used in the original study. In all cases, the objective of the study was to find a set of weights which resulted in reductions in the irregular component as compared with the irregular calculated using the same weights for all series. The set of daily weights for each shipments series, plus the values of the irregular component with and without the adjustment for numbers of trading days, and a more detailed discussion of the methodology comprise Appendix F.

## Seasonal Adjustment Methodology

The monthly data are adjusted for seasonality at the most detailed level tabulated in the survey, using the X-11 ARIMA version of the Census Bureau's seasonal adjustment program.<sup>2</sup> The seasonally adjusted estimates for shipments, unfilled orders, and total inventories for M3 industry categories are calculated by dividing the unadjusted estimates by seasonal adjustment factors computed by the X-11 ARIMA seasonal adjustment program. Seasonally adjusted new orders are computed by adding to the current month's seasonally adjusted shipments the changes in the seasonally adjusted unfilled orders between the current and the prior period.

The inventory by stage of fabrication data are seasonally adjusted at the 2-digit SIC major group level and then summed to total inventory 2-digit SIC estimates. If the summed data do not equal the major group totals resulting from summing the seasonally adjusted total inventories for the individual industries, the difference is proportionally allocated to the stage of fabrication detail.

Seasonal factors are calculated concurrently, that is, each current period observation is included in the calculation of the seasonal factor for that month. The factors reflected in this report are based on data from January 1978 through December 1990 for shipments

and inventories, and January 1977 through December 1990 for unfilled orders. Reliability measures regarding the adequacy of the seasonal adjustment of specific series are presented in Appendix G. For information on specific measures used in the seasonal adjustment analysis, selection of options within the X-11 program for the individual industry series, and tests for the presence of seasonality, contact the Industry Division, Bureau of the Census, Washington, DC 20233, or call (301) 763-2502.

## BENCHMARK PROCEDURE

The M3 survey data are benchmarked to reduce for both sampling and nonsampling errors. The relatively small monthly sample size as well as the differences that result from collecting the monthly data on a divisional basis as compared to the benchmark data on an establishment basis account for most of the revision. Also, some monthly reports received too late to include in the monthly publications are added to improve the revised estimates of change in the historical monthly data.

The benchmarking process for this report included comparing monthly data reported by large companies with their annual data submitted in the 1987 census, 1988 Annual Survey of Manufactures (ASM), and the 1987 Shipments to Federal Government Agencies survey. Review was more intense in those industries affected by the 1987 industry redefinitions. (A discussion of the revisions resulting from the conversion to the 1987 classifications is found in the "Summary of Revisions" in this publication). For these industries, monthly M3 reports were retabulated historically for 1987 through 1990 according to the 1987 classifications to improve the subsequent industry level seasonal adjustment of the estimates.

The benchmarking methodology followed in correcting the industry estimates in this report is somewhat different from that followed in prior reports. Previously, estimates of annual shipments and end-of-year total and stage of fabrication inventories calculated in the monthly survey were benchmarked directly to the data compiled in the quinquennial censuses of manufactures and the interim annual surveys. The end-of-year unfilled orders estimates were benchmarked to levels collected in unfilled orders benchmark surveys conducted for end-of-years 1976 and 1986. For the interim years, the levels were adjusted based on changes in the relationship of unfilled orders to shipments of companies reporting in the monthly survey and the ratio of the ASM shipments estimate to the summed monthly survey data. Since new orders are defined as the change in unfilled orders between the current and prior periods plus the current period shipments, implicit benchmark

<sup>2</sup>The X-11 ARIMA Variant of Census Method II Seasonal Adjustment from Statistics Canada is the program used to calculate trading day weights and to seasonally adjust data in this publication.

<sup>3</sup>"Sliding Spans Diagnostics for Seasonal and Related Adjustments," Findley, Monsell and Shulman, Bureau of the Census, (Washington, D.C. 1986).

estimates for new orders were derived. The last benchmark report following this procedure was issued in August 1988 and included M3 data benchmarked through 1986.

The change to the benchmarking methodology affects the historical data between the 1982 and 1987 census years. The goal was to distribute the error that cumulates in the annual survey estimates between censuses to all interim years; the prior procedure allowed the level correction to affect only the monthly estimates for the census year, resulting in a distortion in the monthly time series trends.

The mathematical technique followed to effect this long range smoothing is similar to that used in prior benchmark operations. In general, the objective function is set to minimize revisions to the trend or month-to-month change in the data when specific annual total or year-end constraints are imposed.

The first step was to distribute the difference between the 1987 census estimates and 1987 ASM estimates across the 5-year period between censuses, minimizing the revision to the year-to-year change in the ASM data. This resulted in modified annual shipments data and end-of year total inventories data for 1983 through 1986. These adjusted levels were then used as constraints in minimizing the revision to the month-to-month trend. A comparison of the published ASM shipments and inventories data with the estimates used for benchmarking is found in Appendix D.

Because the ASM does not include unfilled orders estimates, the end-of-year M3 unfilled orders data are ratio adjusted by the amount of the adjustment to the ASM shipments; these adjusted levels are then used as constraints in revising the interim month-to-month changes. The new orders series are derived as described in the preceding section on monthly estimation procedures.

Data for the benchmarking procedure described above are based on the 1972 SIC definitions. In order to convert the M3 historical data to 1987 SIC definitions, annual adjustments for shipments and inventories were estimated back to 1958, using historical ASM product and industry data, and CIR product data where available. A discussion of this procedure is also found in Appendix D.

The procedure for converting the end-of-year unfilled orders to the 1987 classifications was more judgmental. A proportion of the adjustment to annual shipments data used in converting to the 1987 classifications was added to the end-of-year unfilled order level for the prior year. This proportion was based on the average turnover rate of orders during the last quarter of the prior year. While this procedure is arbitrary, the attempt was to bring the effects of changes in the business cycles to the appropriate order backlog levels. This procedure is detailed in Appendix E.

Finally, the monthly rates of change in the shipments, inventories, and unfilled orders data were adjusted to

the 1987 SIC-based annual data. The monthly rates of change used in this final step are based on changes according to the 1972 classifications and are a source of an undetermined amount of error in the trend information; it was not possible to retabulate the reclassified monthly reports prior to 1987 as would have been the ideal approach.

The procedure for estimating new orders on a 1987 SIC basis is similar to that followed in calculating benchmark estimates on the 1972 basis, that is, the new orders were derived from the benchmarked shipments and change in the benchmarked unfilled orders estimates between the current and prior periods.

## DEFINITION OF TERMS

### Value of Shipments

The value of shipments data in the M3 survey represent net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. This is the same definition as that used in the ASM. However, the data reported in the two surveys frequently are not equal because of differences in the reporting unit as discussed earlier. For multiestablishment companies, the M3 reports typically are company or divisional level reports that encompass groups of plants. The data reported are usually net sales and receipts from customers and do not include the value of interplant transfers. The reported sales are used to calculate month-to-month changes which bring forward the universe estimates developed from the ASM.

In the annual survey, multiestablishment companies report value information for each plant as if it were a separate economic unit. Products are reported at their full economic value, that is, in addition to the cost of production, a reasonable proportion of company overhead and profits is included.

The value of products made elsewhere under contract from materials owned by the plant is also included as well as receipts for contract work performed for others, resales, miscellaneous activities such as the sale of scrap and refuse, installation and repair work performed by employees of the plant, and the receipts for research and development performed at the plant.

In the shipbuilding industry, the value of work done in a given year varies considerably from the value of shipments because of the long lead time between the start and completion of a large vessel. In the annual survey, the value of work done during the year, rather than the value of shipments, is included. The same procedure is followed for aircraft produced on a cost-plus contract. Aircraft produced on a fixed-price contract are reported in the usual manner when the products are shipped. Where value of work done is reported in place of shipments, the work-in-process inventories

are normally charged to the customer as costs are incurred and are not accumulated as finished goods inventories by the shipyard or the aircraft producer.

The value of shipments figures developed from the ASM contain duplication at the M3 industry category and higher level aggregates, since the products of some 4-digit SIC industries are used as materials by other industries within the same M3 industry aggregate. The significance of the duplication within the specific M3 industry categories varies depending on their 4-digit industry composition. It is most pronounced in a few highly integrated industry areas, such as primary metals and motor vehicles and parts.

## INVENTORIES

Inventories in the M3 survey are collected on a current cost or pre-lifo basis. Because different inventory valuation methods are reflected in the reported data, the estimates differ slightly, from replacement cost estimates. Companies using the lifo method for valuing inventories, report their pre-lifo value; that is, the adjustment to their base period prices is excluded.

In the ASM, inventories are collected according to this same definition. However, there are discontinuities in the historical data in both surveys. In the ASM, until 1982, respondents were asked to report their inventories at book values, that is according to whatever method they used for tax purposes (LIFO, FIFO, and so forth.) Because of this the value of aggregate inventories for an industry was not precise. Effective with the 1982 Census of Manufactures, instructions for reporting inventories were changed. LIFO users were asked to report inventories prior to the LIFO adjustment, and also to report the LIFO reserve and the LIFO value after adjustment for the reserve. Because of this change, the 1982 census data for inventories were published on both bases. Inventory data in subsequent ASMs are available only on a pre-LIFO basis, with no book value estimates comparable to the earlier data.

This change in instructions for reporting current cost inventories was carried to the monthly survey beginning in January 1987. The data for 1982 to 1987 in this report have been redefined (but not recollected) to a pre-LIFO or current cost basis. The procedure used in adjusting these monthly estimates from a book value basis to the

pre-LIFO levels used the pre-LIFO end-of-year levels from the ASM as constraints, and the same general procedure for minimizing revisions to the month-to-month change in the monthly book value data as described in the section on benchmarking methodology.

Inventory data are requested from respondents by stage of fabrication, that is, finished goods, work in process, and raw materials and supplies. There are several limitations to the quality of these data for two reasons. First, response to the stage of fabrication inquiries is lower than for total inventories because all companies do not keep their data monthly at this level of detail; those companies which do maintain detail records monthly, frequently do not have data for all three stages of fabrication or have quantity (physical volume) data only. Second, a product considered to be a finished good in one industry, such as steel mills shapes, may be reported as a raw material in another industry, such as stamping plants. Therefore, within the 2-digit major SIC groups the same type of inventory may be included under different stage of fabrication categories. Like total inventories, stage of fabrication inventories are also benchmarked to the ASM pre-LIFO data.

## NEW ORDERS RECEIVED AND UNFILLED ORDERS

New orders are net of order cancellations received during the month. They include orders received and filled during the month as well as orders received for future delivery. They also include the value of contract changes which increase or decrease the value of the unfilled orders to which they relate. Orders are defined to include those supported by binding legal documents such as signed contracts, letters of award, or letters of intent, although in some industries this definition may not be strictly applicable. In the case of letters of intent, the full amount of the sales value is included if the parties are in substantial agreement on the amount; otherwise, only the funds specifically authorized to be expended are included.

Unfilled orders include orders as defined above that have not been reflected as shipments. Generally, unfilled orders at the end of the reporting period are equal to unfilled orders at the beginning of the period plus net new orders received less net shipments.

See footnotes at end of table.

Table 2. **Manufacturers' New Orders and Percent Changes for Industry Categories and Topical Series by Month: 1982-1990—Con.**

- Represents no change. (n) When new orders for a prior month are negative because of cancellations, the percentage change calculation is algebraically negative, even though there is a net dollar increase from the prior month to the current month. (X) Not applicable. (NA) Not available.

Table 3. **Manufacturers' Unfilled Orders and Percent Changes for Industry Categories and Topical Series, End of Month: 1982-1990**

Note: The shipments data used in calculating the ratios excludes the following industries with no unfilled orders: Wood and lumber products; glass containers; metal cans, and shipping containers; farm and garden equipment; motor vehicle assembly operations; other transportation equipment; foods and related products; tobacco; apparel and related products; chemicals; petroleum and coal products; and rubber and plastics products, n.e.c.

(NA) Not available.

**RETURN THIS FORM WITHIN 15 DAYS AFTER RECEIPT**

\*Figures not received when form was prepared. PLEASE ENTER if not already submitted.

A summary of the instructions for completing this form is provided below. A comprehensive instruction manual is available. Copies of the instruction manual or clarification of instructions or definitions may be obtained by calling the contact on the front of the form or by writing to Bureau of the Census, ATTN: Industry Division, Washington, DC 20233.

- **Purpose of this survey** – This form is designed to collect sales, inventories, and orders data from manufacturing companies for use in the preparation of industry estimates for 79 industry categories encompassing all manufacturing activities. These estimates are widely used as indicators of our Nation's current economic condition and of changes in the business cycle. They also provide important components for estimates of the gross national product (GNP) and related figures.

- **Activities to be reported** — A REPORTING UNIT is generally a division, subsidiary, or other operating unit as defined by your company for financial or managerial purposes. Reporting units within the same industry category as defined in the Instruction Manual may be combined for reporting purposes. Thus, a reporting unit could also be a complete company if the company operates predominantly in a single industry category. The Census Bureau may request that very large units with diverse activities be subdivided along industry lines for reporting purposes.

For the purposes of this survey, each reporting unit is to be reported as though a separate entity. Sales (or shipments) should include transfers to other segments of your company, as well as sales to unaffiliated customers. Orders, where applicable, should include orders from other segments of your firm. Finally, the reporting figures should be limited to domestic operations (the 50 States and the District of Columbia). Please note that, while the activities of foreign subsidiaries should be excluded, export sales to and orders from foreign subsidiaries should be included.

- \* **Survey deadlines** — The first report for this survey is based on receipts through approximately the 18th of the month following the reporting period. If possible, please return your report by this time. Otherwise, the figures for your company will be estimated for the early report with actual figures included in the final report only. If a portion of the requested items can be reported early, please call or write so that arrangements for reporting of those data items on a separate form can be made.

- **Use of estimates** If actual figures are not available, reasonable estimates may be used for reporting. Please indicate in the "Remarks" section below if figures are estimates.

- **Comparability with previous reports** — Please indicate in the 'Remarks' section below if there have been any changes in organization or accounting methods that affect comparability with previous reports

- A. SALES** - Report net sales (or shipments) made during the reporting period. Exclude all taxes that were not included in the cost of goods you purchased. Include sales and transfers to other divisions or subsidiaries of your company.

- NEW ORDERS** — Report net new orders received during the reporting period. Include (1) the sales value of orders received and filled during the reporting period, (2) orders received for future deliveries, and (3) the net sales value of changes to existing contracts. Do not include orders requiring further negotiations, authorization, or funding before the order is final.

- C ORDER BACKLOG** – Include orders as defined above that have not yet passed through the sales account

- 0 TOTAL INVENTORY** - Report inventories at current cost or market as of the end of the reporting period. If your inventories are subject to LIFO valuation, report the value prior to the adjustment for the LIFO reserve. The reported figure should include all inventories in the 50 States and the District of Columbia to which you hold title.

The figure for total inventories should be distributed among the following three categories to the extent permitted by your records:

- ### E. MATERIALS AND SUPPLIES INVENTORY

- ### F. WORK-IN-PROCESS INVENTORY

- G. FINISHED GOODS INVENTORY

- H. AMOUNT OF TOTAL INVENTORY VALUED ON LIFO BASIS** — Report the dollar value of inventories included in the total inventory figure that are valued on a last in first out (LIFO) basis. THIS figure should be reported net of the LIFO adjustment or "reserve."

- I LIFO ADJUSTMENT OR "RESERVE"** Report the dollar value of the LIFO adjustment or "reserve" associated with the LIFO INVENTORY

☐ Censored operations

- ☐
- Censored operations

- ☐
- Sold to another company - Enter name and date in "Remarks"

Remarks

- ☐
- Acquired another manufacturing operation — Enter name and data in "Remarks"

### CERTIFICATION

This form is substantially accurate and has been prepared in accordance with the instructions

## Composition of Industry Categories in Terms of 1987 Standard Industrial Classification System

M3/SIC code	M3 category title with comparable 4-digit SIC titles	M3/SIC code	M3 category title with comparable 4-digit SIC titles
	<b>FOOD AND KINDRED PRODUCTS</b>		<b>TEXTILE MILL PRODUCTS</b>
<b>20A</b>	<b>Meat products</b>	<b>22A</b>	<b>Broadwoven fabrics and textiles, except those from knitting and floor covering mills</b>
2011	Meat packing plants	2211	Broadwoven fabric mills, cotton
2013	Sausages and other prepared meats	2221	Broadwoven fabric mills, manmade
2015	Poultry slaughtering and processing	2231	Broadwoven fabric mills, wool
<b>20B</b>	<b>Dairy products</b>	2241	Narrow fabric mills
2021	Creamery butter	2261	Finishing plants, cotton
2022	Cheese, natural and processed	2262	Finishing plants, manmade
2023	Dry, condensed, evaporated products	2269	Finishing plants, n.e.c.
2024	Ice cream and frozen desserts	2281	Yarn spinning mills
2026	Fluid milk	2282	Throwing and winding mills
<b>20C</b>	<b>Fats and oils</b>	2284	Thread mills
2074	Cottonseed oil mills	2295	Coated fabrics, not rubberized
2075	Soybean oil mills	2296	Tire cord and fabrics
2076	Vegetable oil mills, n.e.c.	2297	Nonwoven fabrics
2077	Animal and marine fats and oils	2298	Cordage and twine
2079	Edible fats and oils, n.e.c.	2299	Textile goods, n.e.c.
<b>20D</b>	<b>Beverages</b>	<b>22B</b>	<b>Knitting mill products</b>
2082	Malt beverages	2251	Women's hosiery, except socks
2083	Malt	2252	Hosiery, n.e.c.
2084	Wines, brandy, and brandy spirits	2253	Knit outerwear mills
2085	Distilled and blended liquors	2254	Knit underwear mills
2086	Bottled and canned soft drinks	2257	Weft knit fabric mills
2087	Flavoring extracts and syrups, n.e.c.	2258	Lace and warp knit fabric mills
<b>20E</b>	<b>Food and kindred products, except meat and dairy products, beverages, fats, and oils</b>	2259	Knitting mills, n.e.c.
2032	Canned specialties	<b>22C</b>	<b>Carpets and rugs</b>
2033	Canned fruits and vegetables	2273	Carpets and rugs
2034	Dehydrated fruits,vegetables, and soups		
2035	Pickles, sauces, and salad dressings	<b>23A</b>	<b>Apparel and other finished textile products</b>
2037	Frozen fruits and vegetables	2311	Men's and boys' suits and coats
2038	Frozen specialties, n.e.c.	2321	Men's and boys' shirts
2041	Flour and other grain mill products	2322	Men's and boys' underwear and nightwear
2043	Cereal breakfast foods	2323	Men's and boys' neckwear
2044	Rice milling	2325	Men's and boys' trousers and slacks
2045	Prepared flour mixes and doughs	2326	Men's and boys' work clothing
2046	Wet corn milling	2329	Men's and boys' clothing, n.e.c.
2047	Dog and cat food	2331	Women's and misses' blouses and shirts
2048	Prepared feeds, n.e.c.	2335	Women's, juniors' and misses' dresses
2051	Bread, cake, and related products	2337	Women's and misses' suits and coats
2052	Cookies and crackers	2339	Women's and misses' outerwear, n.e.c.
2053	Frozen bakery products, except bread	2341	Women's and children's underwear
2061	Raw cane sugar	2342	Bras, girdles, and allied garments
2062	Cane sugar refining	2353	Hats, caps, and millinery
2063	Beet sugar	2361	Girls' and children's dresses and blouses
2064	Candy and other confectionery products	2369	Girls' and children's outerwear, n.e.c.
2066	Chocolate and cocoa products	2371	Fur goods
2067	Chewing gum	2381	Fabric dress and work gloves
2068	Salted and roasted nuts and seeds	2384	Robes and dressing gowns
2091	Canned and cured fish and seafoods	2385	Waterproof outerwear
2092	Fresh or frozen prepared fish	2386	Leather and sheep-lined clothing
2095	Roasted coffee	2387	Apparel belts
2096	Potato chips and similar snacks	2389	Apparel and accessories, n.e.c.
2097	Manufactured ice	2391	Curtains and draperies
2098	Macaroni and spaghetti	2392	Housefurnishings, n.e.c.
2099	Food preparations, n.e.c.	2393	Textile bags
	<b>TOBACCO PRODUCTS</b>	2394	Canvas and related products
<b>21A</b>	<b>Cigarettes, cigars, chewing and smoking tobacco, and snuff</b>	2395	Pleating and stitching
2111	Cigarettes	2396	Automotive and apparel trimmings
2121	Cigars	2397	Schiffli machine embroideries
2131	Chewing and smoking tobacco	2399	Fabricated textile products, n.e.c.
2141	Tobacco stemming and redrying		
			<b>LUMBER AND WOOD PRODUCTS</b>
		<b>24A</b>	<b>Wood containers, pallets and skids</b>
		2441	Nailed wood boxes and shook
		2448	Wood pallets and skids
		2449	Wood containers, n.e.c.

M3/SIC code	M3 category title with comparable 4-digit SIC titles	M3/SIC code	M3 category title with comparable 4-digit SIC titles
	<b>LUMBER AND WOOD PRODUCTS—Con.</b>		<b>PRINTING, PUBLISHING, AND ALLIED INDUSTRIES—Con.</b>
24B	Wood buildings and mobile homes	27B	Publishing and printing products, except newspapers, periodicals and books—Con.
2451	Mobile homes	2759	Commercial printing, n.e.c.
2452	Prefabricated wood buildings	2761	Manifold business forms
24C	Wood products, except containers, buildings, and mobile homes	2771	Greeting cards
2411	Logging	2782	Blankbooks and looseleaf binders
2421	Sawmills and planning mills, general	2789	Bookbinding and related work
2426	Hardwood dimension and flooring mills	2791	Typesetting
2429	Special product sawmills, n.e.c.	2796	Platemaking services
2431	Millwork		<b>CHEMICALS AND ALLIED PRODUCTS</b>
2434	Wood kitchen cabinets	28A	Chemical products, except paints, drugs, soaps, toiletries, and agricultural chemicals
2435	Hardwood veneer and plywood	2812	Alkalies and chlorine
2436	Softwood veneer and plywood	2813	Industrial gases
2439	Structural wood members, n.e.c.	2819	Industrial inorganic chemicals, n.e.c.
2491	Wood preserving	2821	Plastics materials and resins
2493	Reconstituted wood products	2822	Synthetic rubber
2499	Wood products, n.e.c.	2823	Cellulosic manmade fibers
	<b>FURNITURE AND FIXTURES</b>	2824	Organic fibers, noncellulosic
25A	Household furniture	2861	Gum and wood chemicals
2511	Wood household furniture	2865	Cyclic crudes and intermediates
2512	Upholstered household furniture	2869	Industrial organic chemicals, n.e.c.
2514	Metal household furniture	2891	Adhesives and sealants
2515	Mattresses and bedsprings	2892	Explosives
2517	Wood TV and radio cabinets	2893	Printing ink
2519	Household furniture, n.e.c.	2895	Carbon black
25B	Furniture, except household	2899	Chemical preparations, n.e.c.
2521	Wood office furniture	28B	Paints and related products
2522	Office furniture, except wood	2816	Inorganic pigments
2531	Public building and related furniture	2851	Paints and allied products
2541	Wood partitions and fixtures	28C	Drugs, soaps, and toiletries
2542	Partitions and fixtures, except wood	2833	Medicinals and botanicals
2591	Drapery hardware and blinds and shades	2834	Pharmaceutical preparations
2599	Furniture and fixtures, n.e.c.	2835	Diagnostic substances
	<b>PAPER AND ALLIED PRODUCTS</b>	2836	Biological products, except diagnostic
26A	Pulp, paper, and paperboard mill products	2841	Soap and other detergents
2611	Pulp mills	2842	Polishes and sanitation goods
2621	Paper mills	2843	Surface active agents
2631	Paperboard mills	2844	Toilet preparations
26B	Paperboard containers and boxes	28D	Agricultural chemicals
2652	Setup paperboard boxes	2873	Nitrogenous fertilizers
2653	Corrugated and solid fiber boxes	2874	Phosphatic fertilizers
2655	Fiber cans, drums and similar products	2875	Fertilizers, mixing only
2656	Sanitary food containers	2879	Agricultural chemicals, n.e.c.
2657	Folding paperboard boxes		<b>PETROLEUM REFINING AND RELATED INDUSTRIES</b>
26C	Miscellaneous converted paper products	29A	Asphalt paving and roofing materials
2671	Paper coated and laminated, packaging	2951	Asphalt paving mixtures and blocks
2672	Paper coated and laminated, n.e.c.	2952	Asphalt felts and coatings
2673	Bags: plastics, laminated, and coated	29B	Petroleum refining, except paving and roofing materials
2674	Bags: uncoated paper and multiwall	2911	Petroleum refining
2675	Die-cut paper and board	2992	Lubricating oils and greases
2676	Sanitary paper products	2999	Petroleum and coal products, n.e.c.
2677	Envelopes		<b>RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS</b>
2678	Stationery products	30A	Tires and tubes
2679	Converted paper products, n.e.c.	3011	Tires and inner tubes
	<b>PRINTING, PUBLISHING, AND ALLIED INDUSTRIES</b>	30B	Rubber and plastics footwear, hose, belting, gaskets and other rubber products, n.e.c.
27A	Newspapers, periodicals and books	3021	Rubber and plastics footwear
2711	Newspapers	3052	Rubber and plastics hose and belting
2721	Periodicals	3053	Gaskets, packing and sealing devices
2731	Book publishing	3061	Mechanical rubber goods
2732	Book printing	3069	Fabricated rubber products, n.e.c.
27B	Publishing and printing products, except newspapers, periodicals and books	30C	Miscellaneous plastics products, n.e.c.
2741	Miscellaneous publishing	3081	Unsupported plastics film and sheet
2752	Commercial printing, lithographic	3082	Unsupported plastics profile shapes
2754	Commercial printing, gravure	3083	Laminated plastics plate and sheet
		3084	Plastics pipe
		3085	Plastics bottles

## Appendix C. Composition of Aggregate Data Series in Terms of M3 Industry Series

### Market Categories

#### Automotive Equipment

- 30A Tires and tubes (pt.)
- 36I Miscellaneous electrical equipment and supplies (pt.)
- 37A Motor vehicle parts, accessories and bodies, except car bodies (pt.)
- 37B Motor vehicles and car bodies (pt.)
- 37J Boats, motorcycles, bicycles, travel trailers, and campers

#### Home Goods and Apparel

- 22B Knitting mill products
- 22C Carpets and rugs
- 23A Apparel and other finished textile products
- 25A Household furniture
- 30B Rubber and plastics footwear, hose, belting, gaskets, and other rubber products, n.e.c. (pt.)
- 31B Leather products, except tanning, finishing, and footwear cut stock
- 32B Kitchen articles and pottery
- 32C Stone, clay, and glass products except glass containers, kitchen articles, and pottery (pt.)
- 34B Cutlery and handtools (pt.)
- 35I Refrigeration, heating and service industry machinery (pt.)
- 36C Household appliances
- 36E Household audio and video equipment
- 38E Ophthalmic goods, watches, and clocks
- 39A Miscellaneous personal goods, such as jewelry, silverware, toys and games, sporting goods, musical instruments, and burial caskets

#### Consumer Staples

- 20A Meat products
- 20B Dairy products
- 20C Fats and oils (pt.)
- 20D Beverages (pt.)
- 20E Food and kindred products, except meat and dairy products, beverages, fats and oils (pt.)
- 21A Cigarettes, cigars, and chewing and smoking tobacco, and snuff
- 26C Miscellaneous converted paper products (pt.)
- 27A Newspapers, periodicals, and books (pt.)

- 27B Publishing and printing products, except newspapers, periodicals and books (pt.)
- 28C Drugs, soaps, and toiletries
- 29B Petroleum refining, except paving and roofing materials (pt.)

#### Machinery and Equipment

- 24B Wood buildings and mobile homes
- 25B Furniture, except household (pt.)
- 34C Building materials and wire products (pt.)
- 35A Steam engines and turbines (including nuclear)
- 35C Farm and garden machinery
- 35D Construction, mining, and material handling equipment
- 35E Metalworking machinery
- 35F Special industry machinery
- 35G General industrial machinery (pt.)
- 35H Computer and office equipment (pt.)
- 35I Refrigeration, heating and service industry machinery (pt.)
- 36A Electrical transmission and distribution equipment
- 36F Communication equipment, except for the Department of Defense
- 37A Motor vehicle parts, accessories and bodies, except car bodies (pt.)
- 37B Motor vehicles and car bodies (pt.)
- 37C Complete aircraft, missiles, and space vehicles, except for the Department of Defense
- 37E Aircraft, missile, and space vehicle engines and parts, except for the Department of Defense (pt.)
- 37G Ships and tank components, except for the Department of Defense
- 37I Railroad equipment
- 38A Search and navigation equipment, except for the Department of Defense
- 38D Medical instruments and supplies
- 38F Photographic goods

#### Business Supplies

- 20E Food and kindred products except meat and dairy products, beverages, and fats and oils (pt.)
- 26C Miscellaneous converted paper products (pt.)
- 27A Newspapers, periodicals, and books (pt.)

- 27B Publishing and printing products, except newspapers, periodicals and books (pt.)
- 28A Chemical products, except paints, drugs, soaps, toiletries, and agricultural chemicals (pt.)
- 28D Agricultural chemicals (pt.)
- 29B Petroleum refining, except paving and roofing materials (pt.)
- 30A Tires and tubes (pt.)
- 34C Building materials and wire products (pt.)
- 34F Miscellaneous fabricated metal products, except containers, cutlery, building materials, ordnance and ammunition (pt.)
- 39B Miscellaneous manufactures, except personal goods

#### **Construction Materials and Supplies**

- 24C Wood products, except containers, buildings, and mobile homes (pt.)
- 25B Furniture, except household (pt.)
- 26A Pulp, paper, and paperboard mill products (pt.)
- 28B Paints and related products
- 29A Asphalt paving and roofing materials
- 30C Miscellaneous plastics products, n.e.c. (pt.)
- 32C Stone, clay, and glass products except glass containers, kitchen articles, and pottery (pt.)
- 33A Blast furnaces and steel mill products (pt.)
- 33C Nonferrous metal products, primary and secondary (pt.)
- 34C Building materials and wire products (pt.)
- 36D Electric lighting and wiring equipment

#### **Defense Products**

- 28A Chemical products, except paints, drugs, soaps, toiletries, and agricultural chemicals (pt.)
- 34X Ordnance and accessories
- 36G Communication equipment for the Department of Defense
- 37D Complete aircraft, missiles, and space vehicles for the Department of Defense
- 37F Aircraft, missiles, and space vehicle engines and parts for the Department of Defense (pt.)
- 37H Ships, tanks, and tank components for the Department of Defense
- 38B Search and navigation equipment for the Department of Defense

#### **Other Materials and Intermediate Products**

- 20C Fats and oils (pt.)
- 20D Beverages (pt.)
- 20E Food and kindred products, except meat and dairy products, beverages, and fats and oils (pt.)
- 22A Broadwoven fabrics and textiles, except those from knitting and floor covering mills
- 24A Wood containers, pallets, and skids

- 24C Wood products, except containers, buildings, and mobile homes (pt.)
- 26A Pulp, paper, and paperboard mill products (pt.)
- 26B Paperboard containers and boxes

# Appendix D. Benchmarking Procedure Used in Revising Historical M3 Shipments and Inventory Estimates

The mathematical technique used in benchmarking historical data in the M3 survey generally follows a trend revision minimization approach with varying constraints. The objective function  $F$

$$1) \quad F = \sum_{i=0}^{n-1} [ (Y_{i+1}/Y_i) - (X_{i+1}/X_i) ]^2$$

defines the sum of squared differences in the month-to-month trend between the original and revised data.

where  $Y_{i+1}/Y_i$  = revised ratio of change from month<sub>*i*</sub> to month<sub>*i+1*</sub>  
 $X_{i+1}/X_i$  = original ratio of change from month<sub>*i*</sub> to month<sub>*i+1*</sub>

$$2) \quad F = \sum_{j=0}^{m-1} [ (Y_{j+1}/Y_j) - (X_{j+1}/X_j) ]^2$$

defines the sum of squared differences in the year-to-year trends in the original and revised data.

where  $Y_{j+1}/Y_j$  = revised ratio of change from year<sub>*j*</sub> to year<sub>*j+1*</sub>  
 $X_{j+1}/X_j$  = original ratio of change from year<sub>*j*</sub> to year<sub>*j+1*</sub>

The specific steps followed in this benchmark report are described below along with the specific constraints applied. Part 1 concerns benchmarking shipments and inventories to 1987 census data according to the 1972 standard industrial classifications (SIC); part 2 describes the conversion of all the historical shipments and inventory data to the 1987 classifications, and benchmarking to the 1987 census and 1988 ASM data on the 1987 SIC basis.

Part 1.A. Shipments and inventory monthly data for the 80 M3 industry categories are benchmarked to 1987 ASM estimates using the monthly data form of the objective function

for  $i=0$ =Jan 1982  
 $i=n$ =Dec 1990

Constraints for shipments are  $Y_{kj}$  for  $j=0$  through 5  
 where  $j=0$ =1982 census annual shipments

$j=1$ =1983 ASM annual shipments  
 $j=2$ =1984 ASM annual shipments  
 $j=3$ =1985 ASM annual shipments  
 $j=4$ =1986 ASM annual shipments  
 $j=5$ =1987 ASM annual shipments

Constraints for inventories are  $Y_{Lj}$  for  $j=0$  through 5  
 where  $j=0$ =1982 census end-of-year inventories

$j=1$ =1984 ASM beginning-of-year inventories  
 $j=2$ =1984 ASM end-of-year inventories  
 $j=3$ =1985 ASM end-of-year inventories  
 $j=4$ =1986 ASM end-of-year inventories  
 $j=5$ =1987 ASM end-of-year inventories

Stage of fabrication inventories are tabulated and benchmarked at the 2-digit major group level using the procedure described for total inventories.

Part 1.B. Shipments and inventory data resulting from Part 1.A. are benchmarked to 1987 census levels, on the 1972 classification basis, in two steps. First, the annual shipments and end-of-year inventories are adjusted to the annual data from the census using the yearly form of the objective function, as defined in Part 1.A., with constraints for shipments, of  $Y_{kj}$

where  $j=0$ =1982 census annual shipments  
 $j=1$ =1987 census annual shipments

and with constraints for inventories of  $Y_{Lj}$

where  $j=0$ =1982 end-of-year inventories  
 $j=1$ =1987 end-of-year inventories

Second, the monthly data calculated in Part 1.A. for shipments and inventories are benchmarked to be consistent with 1987 census data on the 1972 SIC basis, using the adjusted annual data calculated in the first step above as constraints.

Inventories by stage of fabrication are unavailable from the 1987 census data on a 1972 SIC basis. Therefore, the stage of fabrication monthly data were adjusted to the census levels at the 2-digit SIC level as follows:

$$T I_i^0 = \sum_{c=1}^x X_{Li}$$

$$TI_i^A = \sum_{c=1}^x Y_{Li}$$

$$MI_i^A = MI_i^0 (TI_i^A / TI_i^0)$$

$$WI_i^A = WI_i^0 (TI_i^A / TI_i^0)$$

$$FI_i^A = FI_i^0 (TI_i^A / TI_i^0)$$

for  $i=0$  = Jan 1982

$n$  = Dec 1990

$c=1$  through  $x$  = number of M3 industry categories in 2-digit SIC

where  $X_{Li}$  = original monthly value of total inventories for M3 industry categories

$Y_{Li}$  = revised monthly value of total inventories for M3 industry categories

$TI_i^0$  and  $TI_i^A$  = total inventories, original and as adjusted

$MI_i^0$  and  $MI_i^A$  = materials and supplies, original and as adjusted

$WI_i^0$  and  $WI_i^A$  = work in process, original and as adjusted

$FI_i^0$  and  $FI_i^A$  = finished goods, original and as adjusted

Part 2. The revised shipments and total inventories series developed in Part 1 were joined to their historical data for 1958 through 1981 and converted to 1987 SIC definitions according to the following procedure.

For annual shipments:

$$Y_{K87j} = Y_{K72j} \pm [ (Y_{P72j} / Y_{TP72j}) ] (Y_{SI72j})$$

for  $j = 0$  through  $m$

where  $0 = 1958$

$m = 1986$

$Y_{K87j}$  = annual shipments on 1987 SIC basis

$Y_{K72j}$  = annual shipments as adjusted in 1.B.

$Y_{P72j}$  = value of products reclassified

$Y_{TP72j}$  = value of all products in industry having some of its products reclassified

$Y_{SI72j}$  = 4-digit industry value of shipments

Where an entire industry is reclassified,

$$(Y_{P72j} / Y_{TP72j}) = 1$$

Where no products were reclassified  $Y_{P72j} = 0$

For end-of-year total inventories

for  $j = 0$  through  $m$

where  $0 = 1958$

$m = 1986$

$Y_{L87j}$  = end-of-year inventories on 1987 SIC basis

$Y_{L72j}$  = end-of-year inventories as adjusted in 1.B.

$Y_{TI72j}$  = end-of-year inventory for 4-digit industry where products were reclassified

$Y_{SI72j}$  = value of shipments for that industry

$Y_{P72j}$  = value of products reclassified

Where an entire industry is reclassified,  $Y_{SI72j} = Y_{P72j}$

Monthly data for shipments and total inventories for 1958 through 1990 resulting from the procedure in Part 1.A. are adjusted to the 1987 SIC basis using the same procedure as in Part 1.A. with the annual constraints calculated in Part 2.A. for 1958 through 1986; and, for shipments, 1987 census and 1988 ASM data; for inventories, 1987 census beginning and end year data, and 1988 end-of-year ASM data.

For inventories by stage of fabrication, the monthly data as calculated in Part 1.B. are converted to the 1987 SIC basis in two steps. First, the monthly data for January 1958 through December 1990 are adjusted using the equations specified in Part 1.B., substituting

$$\begin{array}{ll} Y_{L87i} & \text{for } Y_{Li} \\ TI_{87i} & \text{for } TI_i^A \\ MI_{87i} & \text{for } MI_i^A \\ WI_{87i} & \text{for } WI_i^A \\ FI_{87i} & \text{for } FI_i^A \end{array}$$

where  $Y_{L87i}$  = monthly inventory values adjusted to the 1987 SIC basis for M3 industry categories

$TI_{87i}$  = monthly inventories at 2-digit level on 1987 SIC basis

$MI_{87i}$  = end-of-year materials and supply inventories

$WI_{87i}$  = end-of-year work in process inventories

$FI_{87i}$  = end-of-year finished goods inventories

Second, each stage of fabrication series is benchmarked to the 1987 beginning and end-of-year, and 1988 end-of-year stage of fabrication data at the 2-digit level using the monthly form of the revision minimization technique described in Part 1.A.

$$Y_{L87j} = Y_{L72j} \pm [ (Y_{TI72j} / Y_{SI72j}) ] (Y_{P72j})$$

for  $j = 0 =$  1987 beginning year census inventories

$j = 1 =$  1987 end-of-year census inventories

$j = 2 =$  1988 end-of-year ASM inventories

Any imbalances between the sum of the three stages of fabrication and the total inventory data at the 2-digit level are corrected by the following procedure:

$$MI_{87i}^A = MI_{87i} [ TI_{87i} / (MI_{87i} + WI_{87i} + FI_{87i}) ]$$

$$WI_{87i}^A = WI_{87i} [ TI_{87i} / (MI_{87i} + WI_{87i} + FI_{87i}) ]$$

$$FI_{87i}^A = FI_{87i} [ TI_{87i} / (MI_{87i} + WI_{87i} + FI_{87i}) ]$$

(NA) Not available.

<sup>1</sup>The 1987 end-of-year inventories on the 1972 SIC basis were summed from the separate industry reports for 1987. The 1987 end-of-year inventories on a 1987 SIC basis were published as prior period data in the 1988 ASM publication. These data might differ due to late corrections carried only to the 1987 SIC based data.

<sup>2</sup>The 1986 end-of-year inventories on the 1972 SIC basis are based on 1986 ASM end-of-year data. The 1986 data on the 1987 basis reflect the beginning year inventory data collected in the 1987 census.

<sup>3</sup>The 1983 end-of-year inventories from the 1983 ASM were replaced with 1984 beginning year data because of significant revisions made after the 1983 ASM data were issued.

## Appendix E. Value of Manufacturers' Unfilled Orders Used in Benchmarking Monthly M3 Estimates

The estimation procedure followed in calculating new and unfilled orders consistent with the benchmarked shipments and inventory data discussed in Appendix D is described below. Revisions to the unfilled orders estimates are based on a trend revision minimization approach defined by objective function F for monthly data

$$1) \quad F = \sum_{i=0}^{n-1} [ (Y_{i+1}/Y_i) - (X_{i+1}/X_i) ]^2$$

where  $Y_{i+1}/Y_i$  = revised ratio of change from month<sub>i</sub> to month<sub>i+1</sub>

$X_{i+1}/X_i$  = original ratio of change from month<sub>i</sub> to month<sub>i+1</sub>

for annual data

$$2) \quad F = \sum_{j=0}^{m-1} [ (Y_{j+1}/Y_j) - (X_{j+1}/X_j) ]^2$$

where  $Y_{j+1}/Y_j$  = revised ratio of change from year<sub>j</sub> to year<sub>j+1</sub>

$X_{j+1}/X_j$  = original ratio of change from year<sub>j</sub> to year<sub>j+1</sub>

Part 1 describes the steps followed in adjusting unfilled orders data for 1982 and later consistent with the 1987 census shipments levels on the 1972 SIC basis. Part 2 describes adjustments made to the historical data back to 1958 to be consistent with 1987 industry classifications. Part 3 describes the procedure for deriving monthly and annual new orders estimates.

Part 1.A. Monthly unfilled orders data for 1982 and later are adjusted to be consistent with the 1987 ASM shipments estimates on the 1972 basis using the monthly form of the objective function

for  $i=0$  = January 1982  
for  $n$  = December 1990

with constraints for end-of-year unfilled orders ( $Y_{uj}$ ) as follows:

for  $j=0$  through 4, the current M3 end-of-year unfilled orders estimates for 1982 through 1986

for  $j=5$  = 1987

$$Y_{u5}^A = Y_{u5}^{M3} (Y_{k5}^A / Y_{k5}^{M3})$$

where  $Y_{u5}^A$  = adjusted end-of-year 1987 unfilled orders

$Y_{u5}^{M3}$  = original M3 end-of-year 1987 unfilled orders

$Y_{k5}^A$  = ASM shipments estimate for 1987 (1972 SIC basis)

$Y_{k5}^{M3}$  = M3 shipments estimate for 1987 (1972 SIC basis)

Part 1.B. The monthly unfilled orders data were then resmoothed with the same form of the objective function but modifying the constraints above by substituting the adjusted ASM shipments for 1983 through 1986 calculated in Appendix D, Part 1.B. and 1987 census shipments in the equations. The constraints were constructed as follows:

$$Y_{uj}^c = Y_{uj}^A (Y_{kj}^c / Y_{kj}^A)$$

for  $j=0$  = 1982,  $Y_{uj}^c = Y_{uj}^A$

for  $j=1$  through 4 = 1983 through 1986

$Y_{uj}^A = Y_{uj}^{M3}$  = current M3 unfilled orders estimates

$Y_{kj}^c$  = adjusted ASM shipments (see Appendix D, Part 1.B.)

$Y_{kj}^A$  = published ASM shipments

for  $j=5$  = 1987

$Y_{uj}^A = Y_{u5}^A$  as calculated in the previous step

$Y_{kj}^c$  = 1987 census shipments data

$Y_{kj}^A$  = unpublished 1987 ASM shipments

Part 2. Developing unfilled order estimates on a 1987 SIC basis was also a 2-stage process. First, the revised monthly data developed in Part 1.B. were joined to the historical data for 1958 through 1981. Second, revised end-of-year unfilled orders were calculated as follows:

for 1958 through 1986

$$Y_{u87j} = Y_{u72j} + \left[ \frac{\left( \sum_{i=10}^{12} Y_{uji} \right) / 3}{\left( \sum_{i=10}^{12} Y_{kji} \right) / 3} \right] \left( \frac{Y_{k87(j+1)} - Y_{k72(j+1)}}{12} \right)$$

for  $j = 0$  through  $m$

$j = 0 = 1958$

$m = 1986$

$i = 10$  through  $12$ ;  $10 = \text{October}$ ,  $11 = \text{November}$ ,

$12 = \text{December}$

$Y_{u87j} = \text{end-of-year unfilled orders on 1987 SIC basis}$

$Y_{u72j} = \text{end-of-year unfilled orders on 1972 SIC basis}$

$(\sum_{i=10}^{12} Y_{uj i}) / 3 = \text{average monthly M3 unfilled orders for last quarter of year, 1972 SIC basis.}$

$(\sum_{i=10}^{12} Y_{kj i}) / 3 = \text{average monthly shipments for last quarter of year, 1972 SIC basis}$

$Y_{k87(j+1)} - Y_{k72(j+1)} = \text{annual value of shipments reclassified;}$

Where no products were reclassified,

$$Y_{k87j} - Y_{k72j} = 0$$

for 1987

$$Y_{u87j} = \left[ \frac{(Y_{u72j}^c / Y_{k72j}^c)}{(Y_{u72(j-1)}^c / Y_{k72(j-1)}^c)} \right] \left( \frac{Y_{u87(j-1)}}{Y_{k87(j-1)}} \right) (Y_{k87j})$$

for  $j - 1 = 1986$

$j = 1987$

where  $Y_{u87j} = 1987 \text{ end-of-year unfilled orders on a 1987 SIC basis}$

$Y_{u72j}^c / Y_{k72j}^c = \text{ratio of unfilled orders to shipments for 1987 on a 1972 SIC basis}$

$Y_{u72(j-1)}^c / Y_{k72(j-1)}^c = \text{ratio of unfilled orders to shipments for 1986 on a 1972 SIC basis}$

$Y_{u87(j-1)} / Y_{k87(j-1)} = \text{ratio of unfilled orders to shipments for 1986 on 1987 SIC basis}$

$Y_{k87j} = 1987 \text{ census shipments on 1987 SIC basis}$

for 1988

$$Y_{u87(j+1)} = [ (Y_{u87(j+1)} / Y_{k87(j+1)})^{M3} ] Y_{k87(j+1)}$$

for  $j+1 = 1988$

where  $Y_{u87(j+1)} = 1988 \text{ revised unfilled orders estimate}$

$Y_{k87(j+1)} = 1988 \text{ ASM shipments estimate}$

$(Y_{u87(j+1)} / Y_{k87(j+1)})^{M3} = \text{unfilled order to shipments ratio in M3 survey as adjusted to the 1987 census}$

Using these unfilled order constraints for 1958 through 1988, monthly data for unfilled orders on a 1987 SIC basis were calculated using the monthly form of the objective function  $F$  as discussed earlier.

Part 3. Monthly and annual new orders estimates are derived consistent with the benchmarked shipments and unfilled orders monthly data using the following relation.

$$Y_{D(i+1)} = Y_{k(i+1)} + (Y_{u(i+1)} - Y_{ui})$$

for  $i = 0$  through  $n$

$0 = \text{December 1957}$

$n = \text{December 1990}$

where  $Y_{D(i+1)} = \text{Derived monthly new orders}$

$Y_{k(i+1)} = \text{Monthly M3 shipments after adjustments to 1987 SIC}$

$Y_{u(i+1)} - Y_{ui} = \text{change in monthly M3 unfilled orders after adjustments to 1987 SIC}$

for January 1958  $Y_{u(i+1)} = Y_{ui}$

## Appendix F. Notes on Trading Day Adjustment Methodology and Weight Patterns

---

The shipments data in the M3 survey are adjusted for calendar month variations, both length of month and number of trading days per month. The selection of these adjustment factors is based primarily on recognition of patterns contained in the data using the regression and spectral analysis capabilities in the X-11 seasonal adjustment software.<sup>1</sup>

Factors are considered optimal when the daily weights assigned to the industry eliminate or diminish the peaks in the spectral plots which are based on calendar frequencies, and lower the absolute value of the month-to-month change in the residual irregular component (I) of the data series. Several variations of the calculation and application of these weights provided multiple versions of the irregular component values. The set of weights selected were those which realized the lowest I

value. The data in the following table include the daily weights used for each industry, the value of the irregular component with and without the trading day adjustment and the method used in selecting the weights.

The results of this trading day adjustment research are implemented effective with this publication and will be used in all subsequent monthly survey press releases until further updating is needed. They affect the historical data in the M3 survey back to 1977. These factors replace those used since 1962 which were based on the same set of daily weights for all but three industries, and resulted in very small residual irregular component values. For further discussion of the current research, contact Lee Wentela, 301-763-1748.

New orders data in this publication are implicitly trading day adjusted by the same factors as shipments. The change in unfilled orders is not trading day adjusted but should possibly be the subject of future research.

---

<sup>1</sup>The X-11 ARIMA Variant of Census Method II Seasonal Adjustment from Statistics Canada is the program used to calculate trading day weights and to seasonally adjust data in this publication.

(NA) Not applicable.

<sup>1</sup>PRW - Daily weights are calculated using the regression routine on X-11 and applied as prior weights in the calculation of trading day and seasonal adjustment factors. NAW - No trading day adjustment factors are used because no trading day pattern could be sufficiently identified. PAW - Historical daily weight pattern is retained which provides equal weight for Monday through Friday and half weights for Saturday and Sunday.

<sup>2</sup>I value is the average absolute month-to-month percent change between all pairs of adjacent months for the irregular component of the data series as determined in the X-11 seasonal adjustment run.

<sup>3</sup>The F value measures the presence of stable trading day patterns, and is the quotient of the between months' variance attributable to the trading day component and the residual variance attributable to the irregular component. Values greater than 9 indicate there is a significant trading day pattern present.

## Appendix G. Summary Measures for Evaluating the Quality of the Seasonal Adjustment of M3 Series

The measures shown in the following table were used in evaluating the current seasonal adjustment procedure. Brief descriptions of the measures follow.

The average absolute percentage change without regard to sign is the average of the absolute percentage changes between all pairs of adjacent months; it is one measure of variability.

"O" is the average month-to-month percentage change, without regard to sign, in the original series. "CI" is the same for the seasonally adjusted series. "I" is the same for the irregular component, which is obtained by dividing the cyclical component into the seasonally adjusted series. "C" is the same for the cyclical component which is a smooth, flexible moving average of the seasonally adjusted series.

"IC" is the average relative month-to-month change, without regard to sign, of the irregular component divided by the average relative month-to-month change, without regard to sign, of the cyclical component. It serves as an indication of the series' relative irregularity.

The measures of relative contributions of the component series to the variation in the original series can be interpreted as measures of the absolute importance of each component. The percentages shown are actually the percentages of the total variance obtained by adding up the variances of the individual components and may differ from those using the variance computed directly from the original series. I is the irregular component, C is the trend component and S the seasonal component. A value of I greater than 30 usually indicates that the erratic movements in the series will significantly diminish the ability of X-11 to identify the seasonal movements in the data. Values of S less than 50 suggest that the seasonal movements are difficult to quantify.

The F value presented here measures the presence of stable seasonality. It is the quotient of two variances: (1) the between months variance which is mainly due to the seasonal, and (2) the residual variance which is mainly due to irregular. A value of 7.0 or greater is used as an indicator of the presence of stable seasonality.

The Q value is a weighted average of 11 different quality control statistics concerned variously with the irregular movements of the series and with seasonal patterns changing too rapidly to be identifiable, particularly in recent years. A value greater than 1.2 is unacceptable, whereas values less than 0.8 often indicate an acceptable adjustment. With values between 0.8 and 1.2, other measures must be consulted to determine if the seasonal movement in the series can be adequately quantified by the X-11 program.

The  $SF_R$  and  $MM_R$  are diagnostics from the sliding spans tests. The  $SF_R$  measures the amount of revision in a seasonal factor for a specific observation which occurs as the specific years included in the seasonal adjustment analysis change. For example, for most series in this publication a 10-year series is examined as three 8-year spans: 1978-1985, 1979-1986, and 1980-1987. For the  $SF_R$  it is considered acceptable if no more than 25 percent of the seasonal factors are revised by more than 3 percent for Q values  $\leq .80$ ; for Q values between .80 and 1.2, the  $SF_R$  should be no more than 15 percent.

The  $MM_R$  is a measure of the revision in the month-to-month percent change for specific observations, as the years included in the span are changed. It is considered acceptable if no more than 40 percent of the observations are revised by more than 3 percent.

The ratio of maximum to minimum seasonal factor gives the ratio of the largest upward adjustment to the largest downward adjustment, and therefore measures the extent of the seasonal movements estimated by the program. An NS in the last column indicates a series is not seasonally adjusted in this publication. The information in the other columns for these series are the measures produced in X-11 ARIMA and sliding spans runs to determine the presence of quantifiable seasonality. For series which are not seasonally adjusted in this publication, the original unadjusted values are included in both the seasonally adjusted and unadjusted totals.

Table G-1. Shipments (Seasonal Factors)

Industry	Average percent changes				Ratio of irregular to cyclical components (T/C)	Relative contribution to variance			F Value	Q Value	Percent revised		Ratio of seasonal factors	Seasonal adjustment indicator
	Original series (O)	Seasonally adjusted series (CT)	Irregular component (T)	Cyclical component (C)		I	C	S			SF <sub>T</sub>	MM <sub>C</sub>

## Acknowledgments

This report was prepared under the general direction of **John Berry**, Assistant Division Chief for Economic Indicator Programs, and under the general supervision of **Gaylord Worden**, Chief, Industry Division. Within the Industry Division, the preparation of this report was performed under the supervision of **Stephen Andrews**, Chief, Manufacturers' Shipments, Inventories, and Orders Branch, assisted by **Eddie Salyers**, **Kathleen Menth**, and **Gloria Cable**. Other contributing industry analysts include **Clarissa Edwards**, **Anthony Figlioli**, **Mary Green**, **John Hargrove**, **Joe Haurand**, **Doris Kling**, **Catherine Knudsen**, **Apostolos Manouilidis**, **Lisa Muggeo**, **Sue Munday**, **Derrick Roy**, **Diane Schapira**, **Sandra Sollinger**, **Lee Wentela**, and **Jessica Young**. The assistance of **Marilyn Clark**, **David Cooper**, **Ronald Danna**, **Alice Miller**, **Korrey Blount**, and **Marvella Hicks** is also appreciated.

**Lillie M. Skinner** coordinated the various phases of the publication process, assisted by **Enid Winters**.

The electronic computer programs were developed under the direction of **Deborah Tasky**, Chief of Programming, assisted by **Sam Jones** and **Hung Phan**.

The staff of Administrative and Publications Services Division, **Walter C. Odom**, Chief, performed publication planning, design, composition, editorial review, and printing, planning, and procurement. **Nelsa Brown** and **Frances Scott** provided publication coordination and editing. **David Coontz**, assisted by **Neeland Queen** and **Kevin Proctor**, provided design and graphic services.

Finally, a special acknowledgment is due to the many businesses whose cooperation was essential to the success of this report.

# Summary of Revisions

---

## GENERAL

The historical data from the Manufacturers' Shipments, Inventories, and Orders survey have been revised as a result of:

1. Benchmarking the shipments and inventory data to the 1989 and 1990 Annual Surveys of Manufactures (ASM).
2. Adjusting new and unfilled orders to be consistent with the benchmarked shipments and inventory data.
3. Updating the trading day adjustment factors in the shipments series.
4. Updating the seasonal adjustment factors for all series.

The results of the first two procedures are summarized for 1989 through 1991 in table A in the form of annual level and year-to-year percent change revisions. The results of the trading day and seasonal adjustment factor updates are shown in table B as they affected the more recent month-to-month trends in the seasonally adjusted data.

## SPECIFIC

### Updating of Trading Day and Seasonal Adjustment Factors

A discussion of the trading-day adjustment methodology and an updated set of daily weights for each shipments' series are found in appendix F. Updated

diagnostic information on the characteristics and quality of the seasonal adjustment for all series is found in the tables in appendix G. The effects of updating the trading day and seasonal adjustment factors on the month-to-month percent changes for 1991 for the major industrial categories and aggregates are shown in table B.

## Data Availability

In addition to this report, historical data from 1958 through 1991 are available on computer tape through the Data User Services Division of the Census Bureau at a cost of \$175.00. To order, call 301-763-4100.

The monthly press releases for the M3 survey are issued around the 17th and 23rd working days of the month following the statistical period covered. These are available on hard copy or via a fax transmission service, both on a subscription fee basis. To subscribe to this service, call 301-763-2502. These reports are also available the day of issue through the Department of Commerce's online Economic Bulletin Board (N-8-1) (202-377-3870) and through the Census Bureau's online information service CENDATA. CENDATA is available from Dialog Information Services, INC. (1-800-334-2464) and CompuServe (1-800-848-8199).

## Description of Survey

The Manufacturers' Shipments, Inventories, and Orders (M3) survey provides broadbased, monthly statistical data on economic conditions in the domestic manufacturing sector. It is designed to measure current industrial activity and to provide an indication of future business trends. The data are used extensively by the Executive Branch of the Government in developing economic, fiscal, and monetary policy; by the Bureau of Economic Analysis as components of the gross domestic product estimates; and by trade associations, corporate economists, and other members of the business community as an analytical tool in their assessment of the current and future economic condition of the country.

### COMPOSITION OF INDUSTRY CATEGORIES

There are 80 industry categories for which estimates are separately tabulated in the M3 survey. These categories are groupings of the 459 manufacturing industries as defined in the 1987 Standard Industrial Classification (SIC) Manual.<sup>1</sup> These categories are listed in appendix B.

Reporting in many of these 80 categories is not sufficient to warrant separate publication of the data. The quality of the data in the specific categories is further limited by consolidated reporting by some large companies. A company which reports on a consolidated basis (either the entire company or a division) is included only in the M3 category in which the reporting unit as a whole is classified and has no influence on the movement of the other industries included in the combined report.

As a result, it has been necessary to combine the 80 industry categories into 45 publication levels for shipments and total inventories. For new and unfilled orders, and inventories by stage of fabrication, it has been necessary to introduce further combinations because of the lower response rates for those items.

### COMPOSITION OF THE SURVEY PANEL

The monthly M3 estimates are based on information obtained from most manufacturing companies with \$500 million or more in annual shipments. Selected smaller

companies are included to strengthen the sample coverage in individual industry categories. These companies are identified from the quinquennial censuses of manufactures and/or interim annual surveys of manufactures.

For firms that operate in a single M3 industry category, the reporting unit typically comprises all operations of the company. Most large, diversified companies, however, file separate reports for divisions with significant activity in different industrial areas.

Each company or reporting unit of a company in the survey is usually comprised of more than one plant or establishment and frequently includes industry activities outside the M3 category in which it is classified. The survey methodology described later in this chapter assumes that the month-to-month changes of the total operations of the reporting units classified in each industry category effectively represent the month-to-month movements of all establishments classified in the most recent census in the 4-digit SIC industries which make up the category.

The sample for this survey was initially selected in 1962 and included all companies with more than 1,000 employees. Smaller companies were sampled proportional to their employment size. Because of poor response rates, reporting by companies with less than 100 employees was discontinued in 1963; and instead, data for these companies were estimated by using overall industry averages based on data reported by the larger companies.

There was also some deterioration in response rates for companies with between 100 and 1,000 employees. Therefore, in January 1975, a supplemental sample of approximately 1,000 companies was selected from the universe of companies in this size range in order to strengthen the estimates. Although the response rate was only about 60 percent for this group, reports from responding companies have been included in the monthly estimates beginning with January 1978.

In recent years, efforts to increase response rates have been based on the size of the value of shipments of the company or reporting unit rather than the employment size. Using this criterion, large companies that do not report in the survey were visited or otherwise contacted and requested to participate or reconsider a previous decision not to participate. Large companies with diversified manufacturing activities that already

<sup>1</sup>The SIC, as developed in the Office of Management Budget by the Technical Committee on Industrial Classification, classifies establishments to the 4-digit industry level by principal type of activity therein engaged.

report in the survey were requested to submit data for industry categories not previously reported.

Letters are sent on an ongoing basis to companies in industry categories with low response rates, soliciting their participation. Also, a probability sample was selected in 1990 and mailed to about 400 mid-sized companies in the plastics industry. The purpose was to test the viability of probability sampling, especially in industries comprised primarily of smaller, less diversified companies.

All of these efforts to increase response resulted in the addition to the panel of about 45 to 55 percent of the companies contacted. However, these increases are frequently offset by respondent dropouts. The current coverage levels in the survey show that approximately 50 percent of the shipments estimates at the total manufacturing level are based on reported data, while the individual coverage rates for the twenty 2-digit major SIC industries vary from about 20 to 99 percent.

## LIMITATIONS OF THE DATA

The monthly data presented in this publication are subject to both sampling and nonsampling errors. Sampling errors occur because reports are received from a sample rather than from the complete universe of manufacturing companies. Because the present composition of the panel is not based on a probability sample, the amount of sampling error cannot be quantified. Nonsampling errors, on the other hand, are attributable to many sources. The use of company or divisional reports to estimate the monthly change for establishments is one source of nonsampling error. The use primarily of large companies to represent the month-to-month movement of all companies is another potential source. In addition, response and processing errors may be present, although most significant errors of this kind are detected through computer edits of the data prior to tabulation and through analytical review of the data.

## MONTHLY ESTIMATION PROCEDURE

The monthly universe estimates of shipments, unfilled orders, and total inventories are derived for each industry category using a link relative procedure. The universe estimate for the previous month is multiplied by the monthly ratio of change tabulated for reporting companies in the current month to arrive at a universe estimate for the current month.

When an individual company reports unusually large changes from the previous month, or when a particular company has unique data patterns differing substantially from the movement shown by the rest of the reporting panel, the company is excluded from the ratio of change calculation but included in the universe

estimate of level. The effect of this procedure is to restrict the estimation for nonrespondents and firms not in the survey panel to the general trend of the industry.

The universe estimate of new orders is derived from the monthly estimate of shipments plus the change in unfilled orders between the current and prior period. The estimate includes orders that are received and filled in the same month as well as orders that have not yet been filled. Also included are the effects of cancellations and modifications of previously reported orders.

The standard ratio estimate procedure is not followed for new orders because not all companies report new orders, and some that do report this item limit their reporting to specific products for which long lead times are required in the production cycle. These companies, in effect, exclude new orders received for products that are shipped from inventory.

A modified procedure also is used to estimate the stage of fabrication inventory data. In this procedure, the total inventory data estimated for each tabulated industry category are retabulated by the appropriate 2-digit SIC major group levels and serve as control totals for the stage of fabrication data. Initial estimates are made for each of the stages of fabrication at the 2-digit SIC level using the ratio estimation procedure. The differences between the sum of the stage of fabrication detail and total inventories at the 2-digit SIC level are then allocated proportionally to the stage of fabrication figures to form the estimates. This procedure is followed because a significant number of companies that report total inventories cannot report inventories by stage of fabrication.

## Trading Day Adjustment

Variations in the rate of manufacturing activity resulting from different numbers of trading days in the same month for different years, and variations in the length of months can be an important cause of month-to-month fluctuations in the shipments data. For many industries, these irregularities can be approximately identified and removed so that the underlying trend-cycle stands out more clearly.

Recent software and data processing improvements have facilitated research and implementation of unique trading day adjustment factors for each series. These improvements include refinements to the trading day analysis in the X-11 seasonal adjustment program,<sup>2</sup> additions to diagnostic software,<sup>3</sup> which identifies pro-

<sup>2</sup>The X-11 ARIMA Variant of Census Method II Seasonal Adjustment from Statistics Canada is the program used to calculate trading day weights and to seasonally adjust data in this publication.

<sup>3</sup>"Sliding Spans Diagnostics for Seasonal and Related Adjustments," Findley, Monsell and Shulman, Bureau of the Census, (Washington, D.C. 1986).

gressively unstable data patterns and redesign of the monthly survey data processing system.

Most of the shipments series have trading day factors calculated in the trading day regression analysis routine of the X-11 software. These factors were used to adjust shipments from 1987 to 1991. Before 1987, the trading factors reported in table F-1 of M3-1(90) were used. However, eight of the shipment series did not have identifiable trading day patterns and are only being adjusted for length of month variations. The set of daily weights for each shipments series and a more detailed discussion of the methodology comprise appendix F.

## Seasonal Adjustment Methodology

The monthly data are adjusted for seasonality at the most detailed level tabulated in the survey, using the X-11 ARIMA version of the Census Bureau's seasonal adjustment program.<sup>4</sup> The seasonally adjusted estimates for shipments, unfilled orders, and total inventories for M3 industry categories are calculated by dividing the unadjusted estimates by seasonal adjustment factors computed by the X-11 ARIMA seasonal adjustment program. Seasonally adjusted new orders are computed by adding the changes between current and prior period seasonally adjusted unfilled orders to the current month's seasonally adjusted shipments.

The inventory by stage of fabrication data are seasonally adjusted at the 2-digit SIC major group level and then summed to total inventory 2-digit SIC estimates. If the summed data do not equal the major group totals resulting from summing the seasonally adjusted total inventories for the individual industries, the difference is proportionally allocated to the stage of fabrication detail.

Seasonal factors are calculated on a concurrent basis and include the current period observation in the calculation of the seasonal factor for that month. The factors reflected in this report are based on data from January 1978 through December 1991 for shipments and inventories and January 1977 through December 1991 for unfilled orders. Reliability measures regarding the adequacy of the seasonal adjustment of specific series are presented in appendix G. For information on specific measures used in the seasonal adjustment analysis, selection of options within the X-11 program for the individual industry series, and tests for the presence of seasonality, contact the Industry Division, Bureau of the Census, Washington, DC 20233, or call (301) 763-2502.

## BENCHMARK PROCEDURE

The M3 survey data are benchmarked to reduce both sampling and nonsampling errors. The relatively small monthly sample size as well as the differences that

result from collecting the monthly data on a divisional basis as compared to the benchmark data on an establishment basis account for most of the revision. Also, some monthly reports received too late to include in the monthly publications are added to improve the revised estimates of change in the historical monthly data.

The benchmarking process for this report included comparing monthly data reported by large companies with their annual data submitted in the 1989 and 1990 Annual Survey of Manufactures (ASM).

Estimates of annual shipments and end-of-year total and stage of fabrication inventories calculated in the monthly survey were benchmarked directly to the data compiled in the quinquennial censuses of manufactures and the interim ASMs. The unfilled orders levels were adjusted based on changes in the ratio of unfilled orders to shipments of companies reporting in the monthly survey and the ratio of the ASM shipments estimate to the summed monthly survey data. Since new orders are defined as the change in unfilled orders between the current and prior periods plus the current period shipments, implicit benchmark estimates for new orders were derived.

## DEFINITION OF TERMS

### Value of Shipments

The value of shipments data in the M3 survey represents net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. This is the same definition used in the ASM. However, the data reported in the two surveys frequently are not equal because of differences in the reporting unit as discussed earlier. For multiestablishment companies, the M3 reports typically are company or divisional level reports that encompass groups of plants. The data reported are usually net sales, and receipts from customers and do not include the value of interplant transfers. The reported sales are used to calculate month-to-month changes which bring forward the universe estimates developed from the ASM.

The value of products made elsewhere under contract from materials owned by the plant is also included as well as receipts for contract work performed for others, resales, miscellaneous activities such as the sale of scrap and refuse, installation and repair work performed by employees of the plant, and the receipts for research and development performed at the plant.

In the shipbuilding industry, the value of work done in a given year varies considerably from the value of shipments because of the long lead time between the start and completion of a large vessel. In the annual survey, the value of work done during the year, rather than the value of shipments, is included. The same

<sup>4</sup>See footnote 2.

procedure is followed for aircraft produced on a cost-plus contract. Aircraft produced on a fixed-price contract are reported in the usual manner when the products are shipped. Where value of work done is reported in place of shipments, the work-in-process inventories are normally charged to the customer as costs are incurred and are not accumulated as finished goods inventories by the shipyard or the aircraft producer.

The value of shipments figures developed from the ASM contain duplication at the M3 industry category and higher level aggregates, since the products of some 4-digit SIC industries are used as materials by other industries within the same M3 industry aggregate. The significance of the duplication within the specific M3 industry categories varies depending on their 4-digit industry composition. It is most pronounced in a few highly integrated industry areas, such as primary metals and motor vehicles and parts.

## INVENTORIES

Inventories in the M3 survey are collected on a current cost or pre-LIFO basis. Because different inventory valuation methods are reflected in the reported data, the estimates differ slightly, from replacement cost estimates. Companies using the LIFO method for valuing inventories, report their pre-LIFO value; that is, the adjustment to their base period prices is excluded.

In the ASM, inventories are collected according to this same definition. However, there are discontinuities in the historical data in both surveys. In the ASM, until 1982, respondents were asked to report their inventories at book values, that is, according to whatever method they used for tax purposes (LIFO, FIFO, and so forth.) Because of this, the value of aggregate inventories for an industry was not precise. Effective with the 1982 Census of Manufactures, instructions for reporting inventories were changed. LIFO users were asked to report inventories prior to the LIFO adjustment and also to report the LIFO reserve and the LIFO value after adjustment for the reserve. Because of this change, the 1982 census data for inventories were published on both bases. Inventory data in subsequent ASMs are available only on a pre-LIFO basis, with no book value estimates comparable to the earlier data.

This change in instructions for reporting current cost inventories was carried to the monthly survey beginning in January 1987. The data for 1982 to 1987 were

previously redefined (but not recollected) on a pre-LIFO or current cost basis. The procedure used in adjusting these monthly estimates from a book value basis to the pre-LIFO levels used the pre-LIFO end-of-year levels from the ASM as constraints and the same general procedure for minimizing revisions to the month-to-month change in the monthly book value data as described in the section on benchmarking methodology.

Inventory data are requested from respondents by stage of fabrication, that is, finished goods, work in process, and raw materials and supplies. There are several limitations to the quality of these data for two reasons. First, response to the stage of fabrication inquiries is lower than for total inventories because all companies do not keep their data monthly at this level of detail; those companies which do maintain detail records monthly, frequently do not have data for all three stages of fabrication or have quantity (physical volume) data only. Second, a product considered to be a finished good in one industry, such as steel mills shapes, may be reported as a raw material in another industry, such as stamping plants. Therefore, within the 2-digit major SIC groups the same type of inventory may be included under different stage of fabrication categories. Like total inventories, stage of fabrication inventories are also benchmarked to the ASM pre-LIFO data.

## NEW ORDERS RECEIVED AND UNFILLED ORDERS

New orders as reported in the monthly survey are net of order cancellations received during the month as well as orders received for future delivery. They also include the value of contract changes which increase or decrease the value of the unfilled orders to which they relate. Orders are defined to include those supported by binding legal documents such as signed contracts, letters of award, or letters of intent, although in some industries this definition may not be strictly applicable. In the case of letters of intent, the full amount of the sales value is included if the parties are in substantial agreement on the amount; otherwise, only the funds specifically authorized to be expended are included.

Unfilled orders include orders as defined above that have not been reflected as shipments. Generally, unfilled orders at the end of the reporting period are equal to unfilled orders at the beginning of the period plus net new orders received less net shipments.

Table 2. **Manufacturers' New Orders and Percent Changes for Industry Categories and Topical Series, by Month: 1982-1991—Con.**

- Represents no change. (n) When new orders for a prior month are negative because of cancellations, the percentage change calculation is algebraically negative, even though there is a net dollar increase from the prior month to the current month. (X) Not applicable. (NA) Not available.

<b>INSTRUCTIONS FOR COMPLETING THIS FORM</b>					
<p style="text-align: center;"><b>GENERAL INFORMATION</b></p> <p>A summary of the instructions for completing this form is provided below. A comprehensive instruction manual is available. Copies of the instruction manual or clarification of instructions or definitions may be obtained by calling the contact on the front of the form or by writing to: <b>Bureau of the Census, ATTN: Industry Division, Washington, DC 20233-0001</b></p> <ul style="list-style-type: none"> <li>• <b>Purpose of this survey</b> — This form is designed to collect sales, inventories, and orders data from manufacturing companies for use in the preparation of industry estimates for 79 industry categories encompassing all manufacturing activities. These estimates are widely used as indicators of our Nation's current economic condition and of changes in the business cycle. They also provide important components for estimates of the gross national product (GNP) and related series.</li> <li>• <b>Activities to be reported</b> — A REPORTING UNIT is generally a division, subsidiary, or other operating unit as defined by your company for financial or managerial purposes. Reporting units within the same industry category, as defined in the Instruction Manual, may be combined for reporting purposes. Thus, a reporting unit could also be a complete company if the company operates predominantly in a single industry category. The Census Bureau may request that very large units with diverse activities be subdivided along industry lines for reporting purposes.</li> </ul> <p>For the purposes of this survey, each reporting unit is to be reported as though a separate entity. Sales (or shipments) should include transfers to other segments of your company, as well as sales to unaffiliated customers. Orders, where applicable, should include orders from other segments of your firm. Finally, the reported figures should be limited to domestic operations in the 50 States and the District of Columbia. Please note that, while the activities of foreign subsidiaries should be excluded, export sales to and orders from foreign subsidiaries should be included.</p> <ul style="list-style-type: none"> <li>• <b>Survey deadlines</b> — The first report for this survey is based on receipts through approximately the 18th of the month following the reporting period. If possible, please return your report by this time. Otherwise, the figures for your company will be estimated for the early report with actual figures included in the final report only. If a portion of the requested items can be reported early, please call or write up that arrangements for reporting of those data items on a separate form can be made.</li> <li>• <b>Use of estimates</b> — If actual figures are not available, reasonable estimates may be used for reporting. Please indicate in the "Remarks" section below if figures are estimates.</li> <li>• <b>Comparability with previous reports</b> — Please indicate in the "Remarks" section below if there have been any changes in organization or accounting methods that affect comparability with previous reports.</li> </ul>	<p style="text-align: center;"><b>REPORTING DEFINITIONS</b></p> <ul style="list-style-type: none"> <li><b>A. SALES</b> — Report net sales (or shipments) made during the reporting period. Exclude all taxes that were not included in the cost of goods you purchased. Include sales and transfers to other divisions or subsidiaries of your company.</li> <li><b>B. NEW ORDERS</b> — Report net new orders received during the reporting period. Include (1) the sales value of orders received and filled during the reporting period, (2) orders received for future deliveries, and (3) the net sales value of changes to existing contracts. Do not include orders requiring further negotiations, authorization, or funding before the order is final.</li> <li><b>C. ORDER BACKLOG</b> — Include orders, as defined above, that have not yet passed through the sales account.</li> <li><b>D. TOTAL INVENTORIES</b> — Report total inventories at current cost or market as of the end of the reporting period, if your inventories are subject to LIFO valuation, report the value prior to the adjustment for the LIFO reserve. The reported figure should include all inventories in the 50 States and the District of Columbia to which you hold title.</li> </ul> <p>The figure for total inventories should equal the sum of the data reported in the following three categories to the extent permitted by your records:</p> <ul style="list-style-type: none"> <li><b>E. MATERIALS AND SUPPLIES INVENTORY</b> — Report materials and supplies inventories at current cost or market as of the end of the reporting period.</li> <li><b>F. WORK-IN-PROCESS INVENTORY</b> — Report work-in-process inventories at current cost or market as of the end of the reporting period.</li> <li><b>G. FINISHED GOODS INVENTORY</b> — Report finished goods inventories at current cost or market as of the end of the reporting period.</li> </ul>				
<p><b>OPERATIONAL STATUS</b></p> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input type="checkbox"/> Ceased operations  <input type="checkbox"/> Sold to another company — Enter name and date in "Remarks"         </div> <div style="width: 45%;"> <input type="checkbox"/> Acquired another manufacturing operation — Enter name and date in "Remarks"         </div> </div> <p>Remarks _____</p>

## Composition of Industry Categories in Terms of 1987 Standard Industrial Classification System

M3/SIC code	M3 category title with comparable 4-digit SIC titles	M3/SIC code	M3 category title with comparable 4-digit SIC titles
	<b>FOOD AND KINDRED PRODUCTS</b>		<b>TEXTILE MILL PRODUCTS</b>
<b>20A</b>	<b>Meat products</b>	<b>22A</b>	<b>Broadwoven fabrics and textiles, except those from knitting and floor covering mills</b>
2011	Meat packing plants	2211	Broadwoven fabric mills, cotton
2013	Sausages and other prepared meats	2221	Broadwoven fabric mills, manmade
2015	Poultry slaughtering and processing	2231	Broadwoven fabric mills, wool
<b>20B</b>	<b>Dairy products</b>	2241	Narrow fabric mills
2021	Creamery butter	2261	Finishing plants, cotton
2022	Cheese, natural and processed	2262	Finishing plants, manmade
2023	Dry, condensed, evaporated products	2269	Finishing plants, n.e.c.
2024	Ice cream and frozen desserts	2281	Yarn spinning mills
2026	Fluid milk	2282	Throwing and winding mills
<b>20C</b>	<b>Fats and oils</b>	2284	Thread mills
2074	Cottonseed oil mills	2295	Coated fabrics, not rubberized
2075	Soybean oil mills	2296	Tire cord and fabrics
2076	Vegetable oil mills, n.e.c.	2297	Nonwoven fabrics
2077	Animal and marine fats and oils	2298	Cordage and twine
2079	Edible fats and oils, n.e.c.	2299	Textile goods, n.e.c.
<b>20D</b>	<b>Beverages</b>	<b>22B</b>	<b>Knitting mill products</b>
2082	Malt beverages	2251	Women's hosiery, except socks
2083	Malt	2252	Hosiery, n.e.c.
2084	Wines, brandy, and brandy spirits	2253	Knit outerwear mills
2085	Distilled and blended liquors	2254	Knit underwear mills
2086	Bottled and canned soft drinks	2257	Weft knit fabric mills
2087	Flavoring extracts and syrups, n.e.c.	2258	Lace and warp knit fabric mills
<b>20E</b>	<b>Food and kindred products, except meat and dairy products, beverages, fats, and oils</b>	2259	Knitting mills, n.e.c.
2032	Canned specialties	<b>22C</b>	<b>Carpets and rugs</b>
2033	Canned fruits and vegetables	2273	Carpets and rugs
2034	Dehydrated fruits, vegetables, and soups		<b>APPAREL AND OTHER FINISHED TEXTILE PRODUCTS</b>
2035	Pickles, sauces, and salad dressings	<b>23A</b>	<b>Apparel and other finished textile products</b>
2037	Frozen fruits and vegetables	2311	Men's and boys' suits and coats
2038	Frozen specialties, n.e.c.	2321	Men's and boys' shirts
2041	Flour and other grain mill products	2322	Men's and boys' underwear and nightwear
2043	Cereal breakfast foods	2323	Men's and boys' neckwear
2044	Rice milling	2325	Men's and boys' trousers and slacks
2045	Prepared flour mixes and doughs	2326	Men's and boys' work clothing
2046	Wet corn milling	2329	Men's and boys' clothing, n.e.c.
2047	Dog and cat food	2331	Women's and misses' blouses and shirts
2048	Prepared feeds, n.e.c.	2335	Women's, juniors' and misses' dresses
2051	Bread, cake, and related products	2337	Women's and misses' suits and coats
2052	Cookies and crackers	2339	Women's and misses' outerwear, n.e.c.
2053	Frozen bakery products, except bread	2341	Women's and children's underwear
2061	Raw cane sugar	2342	Bras, girdles, and allied garments
2062	Cane sugar refining	2353	Hats, caps, and millinery
2063	Beet sugar	2361	Girls' and children's dresses and blouses
2064	Candy and other confectionery products	2369	Girls' and children's outerwear, n.e.c.
2066	Chocolate and cocoa products	2371	Fur goods
2067	Chewing gum	2381	Fabric dress and work gloves
2068	Salted and roasted nuts and seeds	2384	Robes and dressing gowns
2091	Canned and cured fish and seafoods	2385	Waterproof outerwear
2092	Fresh or frozen prepared fish	2386	Leather and sheep-lined clothing
2095	Roasted coffee	2387	Apparel belts
2096	Potato chips and similar snacks	2389	Apparel and accessories, n.e.c.
2097	Manufactured ice	2391	Curtains and draperies
2098	Macaroni and spaghetti	2392	Housefurnishings, n.e.c.
2099	Food preparations, n.e.c.	2393	Textile bags
	<b>TOBACCO PRODUCTS</b>	2394	Canvas and related products
<b>21A</b>	<b>Cigarettes, cigars, chewing and smoking tobacco, and snuff</b>	2395	Pleating and stitching
2111	Cigarettes	2396	Automotive and apparel trimmings
2121	Cigars	2397	Schiffli machine embroideries
2131	Chewing and smoking tobacco	2399	Fabricated textile products, n.e.c.
2141	Tobacco stemming and redrying		<b>LUMBER AND WOOD PRODUCTS</b>
		<b>24A</b>	<b>Wood containers, pallets and skids</b>
		2441	Nailed wood boxes and shooks
		2448	Wood pallets and skids
		2449	Wood containers, n.e.c.

M3/SIC code	M3 category title with comparable 4-digit SIC titles	M3/SIC code	M3 category title with comparable 4-digit SIC titles
	<b>LUMBER AND WOOD PRODUCTS—Con.</b>		<b>PRINTING, PUBLISHING, AND ALLIED INDUSTRIES—Con.</b>
24B	Wood buildings and mobile homes	27B	Publishing and printing products, except newspapers, periodicals and books—Con.
2451	Mobile homes	2759	Commercial printing, n.e.c.
2452	Prefabricated wood buildings	2761	Manifold business forms
24C	Wood products, except containers, buildings, and mobile homes	2771	Greeting cards
2411	Logging	2782	Blankbooks and looseleaf binders
2421	Sawmills and planning mills, general	2789	Bookbinding and related work
2426	Hardwood dimension and flooring mills	2791	Typesetting
2429	Special product sawmills, n.e.c.	2796	Platemaking services
2431	Millwork		<b>CHEMICALS AND ALLIED PRODUCTS</b>
2434	Wood kitchen cabinets	28A	Chemical products, except paints, drugs, soaps, toiletries, and agricultural chemicals
2435	Hardwood veneer and plywood	2812	Alkalies and chlorine
2436	Softwood veneer and plywood	2813	Industrial gases
2439	Structural wood members, n.e.c.	2819	Industrial inorganic chemicals, n.e.c.
2491	Wood preserving	2821	Plastics materials and resins
2493	Reconstituted wood products	2822	Synthetic rubber
2499	Wood products, n.e.c.	2823	Cellulosic manmade fibers
	<b>FURNITURE AND FIXTURES</b>	2824	Organic fibers, noncellulosic
25A	Household furniture	2861	Gum and wood chemicals
2511	Wood household furniture	2865	Cyclic crudes and intermediates
2512	Upholstered household furniture	2869	Industrial organic chemicals, n.e.c.
2514	Metal household furniture	2891	Adhesives and sealants
2515	Mattresses and bedsprings	2892	Explosives
2517	Wood TV and radio cabinets	2893	Printing ink
2519	Household furniture, n.e.c.	2895	Carbon black
25B	Furniture, except household	2899	Chemical preparations, n.e.c.
2521	Wood office furniture	28B	Paints and related products
2522	Office furniture, except wood	2816	Inorganic pigments
2531	Public building and related furniture	2851	Paints and allied products
2541	Wood partitions and fixtures	28C	Drugs, soaps, and toiletries
2542	Partitions and fixtures, except wood	2833	Medicinals and botanicals
2591	Drapery hardware and blinds and shades	2834	Pharmaceutical preparations
2599	Furniture and fixtures, n.e.c.	2835	Diagnostic substances
	<b>PAPER AND ALLIED PRODUCTS</b>	2836	Biological products, except diagnostic
26A	Pulp, paper, and paperboard mill products	2841	Soap and other detergents
2611	Pulp mills	2842	Polishes and sanitation goods
2621	Paper mills	2843	Surface active agents
2631	Paperboard mills	2844	Toilet preparations
26B	Paperboard containers and boxes	28D	Agricultural chemicals
2652	Setup paperboard boxes	2873	Nitrogenous fertilizers
2653	Corrugated and solid fiber boxes	2874	Phosphatic fertilizers
2655	Fiber cans, drums and similar products	2875	Fertilizers, mixing only
2656	Sanitary food containers	2879	Agricultural chemicals, n.e.c.
2657	Folding paperboard boxes		<b>PETROLEUM REFINING AND RELATED INDUSTRIES</b>
26C	Miscellaneous converted paper products	29A	Asphalt paving and roofing materials
2671	Paper coated and laminated, packaging	2951	Asphalt paving mixtures and blocks
2672	Paper coated and laminated, n.e.c.	2952	Asphalt felts and coatings
2673	Bags: plastics, laminated, and coated	29B	Petroleum refining, except paving and roofing materials
2674	Bags: uncoated paper and multiwall	2911	Petroleum refining
2675	Die-cut paper and board	2992	Lubricating oils and greases
2676	Sanitary paper products	2999	Petroleum and coal products, n.e.c.
2677	Envelopes		<b>RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS</b>
2678	Stationery products	30A	Tires and tubes
2679	Converted paper products, n.e.c.	3011	Tires and inner tubes
	<b>PRINTING, PUBLISHING, AND ALLIED INDUSTRIES</b>	30B	Rubber and plastics footwear, hose, belting, gaskets and other rubber products, n.e.c.
27A	Newspapers, periodicals and books	3021	Rubber and plastics footwear
2711	Newspapers	3052	Rubber and plastics hose and belting
2721	Periodicals	3053	Gaskets, packing and sealing devices
2731	Book publishing	3061	Mechanical rubber goods
2732	Book printing	3069	Fabricated rubber products, n.e.c.
27B	Publishing and printing products, except newspapers, periodicals and books	30C	Miscellaneous plastics products, n.e.c.
2741	Miscellaneous publishing	3081	Unsupported plastics film and sheet
2752	Commercial printing, lithographic	3082	Unsupported plastics profile shapes
2754	Commercial printing, gravure	3083	Laminated plastics plate and sheet
		3084	Plastics pipe
		3085	Plastics bottles

		3999	Manufacturing industries, n.e.c.

## Appendix C. Composition of Aggregate Data Series in Terms of M3 Industry Series

### Market Categories

#### Automotive Equipment

- 30A Tires and tubes (pt.)
- 36I Miscellaneous electrical equipment and supplies (pt.)
- 37A Motor vehicle parts, accessories and bodies, except car bodies (pt.)
- 37B Motor vehicles and car bodies (pt.)
- 37J Boats, motorcycles, bicycles, travel trailers, and campers

#### Home Goods and Apparel

- 22B Knitting mill products
- 22C Carpets and rugs
- 23A Apparel and other finished textile products
- 25A Household furniture
- 30B Rubber and plastics footwear, hose, belting, gaskets, and other rubber products, n.e.c. (pt.)
- 31B Leather products, except tanning, finishing, and footwear cut stock
- 32B Kitchen articles and pottery
- 32C Stone, clay, and glass products except glass containers, kitchen articles, and pottery (pt.)
- 34B Cutlery and handtools (pt.)
- 35I Refrigeration, heating and service industry machinery (pt.)
- 36C Household appliances
- 36E Household audio and video equipment
- 38E Ophthalmic goods, watches, and clocks
- 39A Miscellaneous personal goods, such as jewelry, silverware, toys and games, sporting goods, musical instruments, and burial caskets

#### Consumer Staples

- 20A Meat products
- 20B Dairy products
- 20C Fats and oils (pt.)
- 20D Beverages (pt.)
- 20E Food and kindred products, except meat and dairy products, beverages, fats and oils (pt.)
- 21A Cigarettes, cigars, and chewing and smoking tobacco, and snuff
- 26C Miscellaneous converted paper products (pt.)
- 27A Newspapers, periodicals, and books (pt.)

- 27B Publishing and printing products, except newspapers, periodicals and books (pt.)
- 28C Drugs, soaps, and toiletries
- 29B Petroleum refining, except paving and roofing materials (pt.)

#### Machinery and Equipment

- 24B Wood buildings and mobile homes
- 25B Furniture, except household (pt.)
- 34C Building materials and wire products (pt.)
- 35A Steam engines and turbines (including nuclear)
- 35C Farm and garden machinery
- 35D Construction, mining, and material handling equipment
- 35E Metalworking machinery
- 35F Special industry machinery
- 35G General industrial machinery (pt.)
- 35H Computer and office equipment (pt.)
- 35I Refrigeration, heating and service industry machinery (pt.)
- 36A Electrical transmission and distribution equipment
- 36F Communication equipment, except for the Department of Defense
- 37A Motor vehicle parts, accessories and bodies, except car bodies (pt.)
- 37B Motor vehicles and car bodies (pt.)
- 37C Complete aircraft, missiles, and space vehicles, except for the Department of Defense
- 37E Aircraft, missile, and space vehicle engines and parts, except for the Department of Defense (pt.)
- 37G Ships and tank components, except for the Department of Defense
- 37I Railroad equipment
- 38A Search and navigation equipment, except for the Department of Defense
- 38D Medical instruments and supplies
- 38F Photographic goods

#### Business Supplies

- 20E Food and kindred products except meat and dairy products, beverages, and fats and oils (pt.)
- 26C Miscellaneous converted paper products (pt.)
- 27A Newspapers, periodicals, and books (pt.)

- 27B Publishing and printing products, except newspapers, periodicals and books (pt.)
- 28A Chemical products, except paints, drugs, soaps, toiletries, and agricultural chemicals (pt.)
- 28D Agricultural chemicals (pt.)
- 29B Petroleum refining, except paving and roofing materials (pt.)
- 30A Tires and tubes (pt.)
- 34C Building materials and wire products (pt.)
- 34F Miscellaneous fabricated metal products, except containers, cutlery, building materials, ordnance and ammunition (pt.)
- 39B Miscellaneous manufactures, except personal goods

### Construction Materials and Supplies

- 24C Wood products, except containers, buildings, and mobile homes (pt.)
- 25B Furniture, except household (pt.)
- 26A Pulp, paper, and paperboard mill products (pt.)
- 28B Paints and related products
- 29A Asphalt paving and roofing materials
- 30C Miscellaneous plastics products, n.e.c. (pt.)
- 32C Stone, clay, and glass products except glass containers, kitchen articles, and pottery (pt.)
- 33A Blast furnaces and steel mill products (pt.)
- 33C Nonferrous metal products, primary and secondary (pt.)
- 34C Building materials and wire products (pt.)
- 36D Electric lighting and wiring equipment

### Defense Products

- 28A Chemical products, except paints, drugs, soaps, toiletries, and agricultural chemicals (pt.)
- 34X Ordnance and accessories
- 36G Communication equipment for the Department of Defense
- 37D Complete aircraft, missiles, and space vehicles for the Department of Defense
- 37F Aircraft, missiles, and space vehicle engines and parts for the Department of Defense (pt.)
- 37H Ships, tanks, and tank components for the Department of Defense
- 38B Search and navigation equipment for the Department of Defense

### Other Materials and Intermediate Products

- 20C Fats and oils (pt.)
- 20D Beverages (pt.)
- 20E Food and kindred products, except meat and dairy products, beverages, and fats and oils (pt.)
- 22A Broadwoven fabrics and textiles, except those from knitting and floor covering mills
- 24A Wood containers, pallets, and skids

- 24C Wood products, except containers, buildings, and mobile homes (pt.)
- 26A Pulp, paper, and paperboard mill products (pt.)
- 26B Paperboard containers and boxes
- 26C Miscellaneous converted paper products (pt.)
- 28A Chemical products, except paints, drugs, soaps, toiletries, and agricultural chemicals (pt.)
- 28B Paints and related products (pt.)
- 28D Agricultural chemicals (pt.)
- 29B Petroleum refining, except paving and roofing materials (pt.)
- 30A Tires and tubes (pt.)
- 30B Rubber and plastics footwear, hose, belting, gaskets, and other rubber products, n.e.c. (pt.)
- 30C Miscellaneous plastics products, n.e.c. (pt.)
- 31A Leather tanning and finishing, and footwear cut stock
- 32A Glass containers
- 32C Stone, clay, and glass products, except glass containers, kitchen articles, and pottery (pt.)
- 33A Blast furnaces and steel mill products (pt.)
- 33B Iron and steel foundry products
- 33C Nonferrous metal products, primary and secondary (pt.)
- 34A Metal cans and shipping containers
- 34B Cutlery and handtools (pt.)
- 34C Building materials and wire products (pt.)
- 34F Special industry machinery (pt.)
- 35B Internal combustion engines including diesel, except automotive and aircraft
- 35G General industrial machinery (pt.)
- 35H Computer and office equipment (pt.)
- 35J Industrial machinery, n.e.c.
- 36B Electrical industrial apparatus
- 36H Electronic components and accessories
- 36I Miscellaneous electrical equipment and supplies (pt.)
- 37A Motor vehicle parts, accessories and bodies, except car bodies (pt.)
- 37X Aircraft, missile, and space vehicle engines and parts (pt.)
- 38C Measuring and controlling devices

### Durable Goods Industries

### Nondefense Capital Goods

- 34D Ordnance and accessories, except for the Department of Defense
- 35A Steam engines and turbines (including nuclear)
- 35B Internal combustion engines including diesel, except automotive and aircraft
- 35D Construction, mining, and material handling equipment
- 35E Metalworking machinery
- 35F Special industry machinery

35G General industrial machinery  
 35H Computer and office equipment  
 35I Refrigeration, heating and service industry machinery  
 36A Electrical transmission and distribution equipment  
 36B Electrical industrial apparatus  
 36F Communication equipment, except for the Department of Defense  
 37C Complete aircraft, missiles, and space vehicles, except for the Department of Defense  
 37E Aircraft, missiles, and space vehicle engines and parts, except for the Department of Defense  
 37G Ships and tank components, except for the Department of Defense  
 37I Railroad equipment  
 38A Search and navigation equipment, except for the Department of Defense

#### **Nondefense Capital Goods, excluding Aircraft and Parts**

34D Ordnance and accessories, except for the Department of Defense  
 35A Steam engines and turbines (including nuclear)  
 35B Internal combustion engines including diesel, except automotive and aircraft  
 35D Construction, mining, and material handling equipment  
 35E Metalworking machinery  
 35F Special industry machinery  
 35G General industrial machinery  
 35H Computer and office equipment  
 35I Refrigeration, heating and service industry machinery  
 36A Electrical transmission and distribution equipment  
 36B Electrical industrial apparatus  
 36F Communication equipment, except for the Department of Defense  
 37G Ships and tank components, except for the Department of Defense  
 37I Railroad equipment  
 38A Search and navigation equipment, except for the Department of Defense

#### **Defense Capital Goods**

34E Ordnance and accessories for the Department of Defense, except tanks and missiles  
 36G Communication equipment for the Department of Defense  
 37D Complete aircraft, missiles, and space vehicles for the Department of Defense  
 37F Aircraft, missile, and space vehicle engines and parts for the Department of Defense  
 37H Ships, tanks, and tank components for the Department of Defense

38B Search and navigation equipment for the Department of Defense

#### **Durables Excluding Capital Goods**

24A Wood containers, pallets, and skids  
 24B Wood buildings and mobile homes  
 24C Wood products, except containers, buildings, and mobile homes  
 25A Household furniture  
 25B Furniture, except household  
 32A Glass containers  
 32B Kitchen articles and pottery  
 32C Stone, clay, and glass products except glass containers, kitchen articles, and pottery  
 33A Blast furnaces and steel mill products  
 33B Iron and steel foundry products  
 33C Nonferrous metal products, primary and secondary  
 34A Metal cans and shipping containers  
 34B Cutlery and handtools  
 34C Building materials and wire products  
 34F Miscellaneous fabricated metal products, except containers, cutlery, building materials, ordnance and ammunition  
 35C Farm and garden machinery  
 35J Industrial machinery, n.e.c.  
 36C Household appliances  
 36D Electric lighting and wiring equipment  
 36E Household audio and video equipment  
 36H Electronic components and accessories  
 36I Miscellaneous electrical equipment and supplies  
 37A Motor vehicle parts, accessories and bodies, except car bodies  
 37B Motor vehicles and car bodies  
 37J Boats, motorcycles, bicycles, travel trailers, and campers  
 38C Measuring and controlling devices  
 38D Medical instruments and supplies  
 38E Ophthalmic goods, watches, and clocks  
 38F Photographic goods  
 39A Miscellaneous personal goods, such as jewelry, silverware, toys, and games, sporting goods, musical instruments, and burial caskets  
 39B Miscellaneous manufactures, except personal goods

#### **Producers' Durable Equipment**

#### **Information Related Equipment**

35H Computer and office equipment  
 36F Communication equipment, except for the Department of Defense  
 38A Search and navigation equipment, except for the Department of Defense  
 38C Measuring and controlling devices

38F Photographic goods

**Industrial Equipment**

- 34C Building materials and wire products
- 34F Miscellaneous fabricated metal products, except containers, cutlery, building materials, ordnance and ammunition
- 35A Steam engines and turbines (including nuclear)
- 35B Internal combustion engines including diesel, except automotive and aircraft
- 35E Metalworking machinery
- 35F Special industry machinery
- 35G General industrial machinery
- 36A Electrical transmission and distribution equipment
- 36B Electrical industrial apparatus

**Transportation Equipment**

- 37A Motor vehicle parts, accessories and bodies, except car bodies
- 37B Motor vehicles and car bodies
- 37C Complete aircraft, missiles, and space vehicles, except for the Department of Defense
- 37G Ships and tank components, except for the Department of Defense
- 37I Railroad equipment

**Other Equipment**

- 25A Household furniture
- 25B Furniture, except household
- 35C Farm and garden machinery
- 35D Construction, mining, and material handling equipment

- 35I Refrigeration, heating and service industry machinery
- 36C Household appliances
- 36I Miscellaneous electrical equipment and supplies
- 38D Medical instruments and supplies
- 39A Miscellaneous personal goods, such as jewelry, silverware, toys and games, sporting goods, musical instruments, and burial caskets
- 39B Miscellaneous manufactures, except personal goods

**Miscellaneous Aggregates**

**Household Durable Goods**

- 25A Household furniture
- 32B Kitchen articles and pottery
- 34B Cutlery and handtools
- 36C Household appliances
- 36E Household audio and video equipment
- 38E Ophthalmic goods, watches, and clocks
- 39A Miscellaneous personal goods, such as jewelry, silverware, toys and games, sporting goods, musical instruments, and burial caskets

**Health Care Equipment and Products**

- 25B Furniture, except household (pt.)
- 28C Drugs, soaps, and toiletries (pt.)
- 30B Rubber and plastics footwear, hose, belting, gaskets, and other rubber products, n.e.c. (pt.)
- 30C Miscellaneous plastics products, n.e.c. (pt.)
- 38D Medical instruments and supplies

# Appendix D. Benchmarking Procedure Used in Revising Historical M3 Shipments and Inventory Estimates 1982-1991

The mathematical technique used in benchmarking historical data in the M3 survey generally follows a trend revision minimization approach with constraints determined by annual benchmarks. The objective function F

$$F = \sum_{i=0}^{n-1} [(Y_{i+1}/Y_i) - (X_{i+1}/X_i)]^2$$

defines the sum of squared differences in the month-to-month trend between the original and revised data.

where  $i = 0 = \text{December 1988}$

$i = n = \text{December 1991}$

$Y_{i+1}/Y_i = \text{revised ratio of change from month}_i \text{ to month}_{i+1}$

$X_{i+1}/X_i = \text{original ratio of change from month}_i \text{ to month}_{i+1}$

For shipments and inventories, monthly data for the 80 M3 industry categories are benchmarked using the trend minimization function F.

Constraints for shipments are:

$\sum Y_i = 1982 \text{ Benchmark}; i \in 1982$

$\sum Y_i = 1983 \text{ Benchmark}; i \in 1983$

$\sum Y_i = 1984 \text{ Benchmark}; i \in 1984$

$\sum Y_i = 1985 \text{ Benchmark}; i \in 1985$

$\sum Y_i = 1986 \text{ Benchmark}; i \in 1986$

$\sum Y_i = 1987 \text{ Benchmark}; i \in 1987$

$\sum Y_i = 1988 \text{ Benchmark}; i \in 1988$

$\sum Y_i = 1989 \text{ Benchmark}; i \in 1989$

$\sum Y_i = 1990 \text{ Benchmark}; i \in 1990$

Constraints for inventories are:

$Y_0 = \text{December 1981 Benchmark}$

$Y_{12} = \text{December 1982 Benchmark}$

$Y_{24} = \text{December 1983 Benchmark}$

$Y_{36} = \text{December 1984 Benchmark}$

$Y_{48} = \text{December 1985 Benchmark}$

$Y_{60} = \text{December 1986 Benchmark}$

$Y_{72} = \text{December 1987 Benchmark}$

$Y_{84} = \text{December 1988 Benchmark}$

$Y_{96} = \text{December 1989 Benchmark}$

$Y_{108} = \text{December 1990 Benchmark}$

Stage of fabrication inventories are tabulated and benchmarked at the 2-digit SIC major group level using the procedure described for total inventories.

Any imbalances between the sum of the three stages of fabrication and the total inventory data at the 2-digit SIC major group level are corrected by the following raking procedure:

$$MI_J^A = MI_J^O [TI_J / (MI_J^O + WI_J^O + FI_J^O)]$$

$$WI_J^A = WI_J^O [TI_J / (MI_J^O + WI_J^O + FI_J^O)]$$

$$FI_J^A = FI_J^O [TI_J / (MI_J^O + WI_J^O + FI_J^O)]$$

for  $J = 0 \text{ through } n$

where  $0 = \text{January 1982}$

$n = \text{December 1991}$

$MI_J^O$  and  $MI_J^A$  are materials and supplies original and as raked.

$WI_J^O$  and  $WI_J^A$  are work in process original and as raked.

$FI_J^O$  and  $FI_J^A$  are finished goods original and as raked.

$TI_J = \text{Benchmarked Total Inventories}$

Table D-1. BENCHMARK DATA FOR SHIPMENTS AND TOTAL INVENTORIES FOR M3 INDUSTRY CATEGORIES

## Appendix E. Value of Manufacturers' Unfilled Orders and New Orders Used in Benchmarking Monthly M3 Estimates

The estimation procedure followed in calculating new and unfilled orders consistent with the benchmarked shipments and inventory data discussed in Appendix D is described below. Revisions to the unfilled orders estimates are based on a trend revision minimization approach defined by objective function F with constraints determined by the equations given below.

$$F = \sum_{i=0}^{n-1} [(Y_{i+1}/Y_i) - (X_{i+1}/X_i)]^2$$

where  $i = 0 = \text{December 1988}$

$i = n = \text{December 1991}$

$Y_{i+1}/Y_i = \text{revised ratio of change from month}_i \text{ to month}_{i+1}$

$X_{i+1}/X_i = \text{original ratio of change from month}_i \text{ to month}_{i+1}$

Monthly unfilled orders data for 1989 and later are adjusted to be consistent with the 1989 and 1990 ASM shipments estimates using the trend minimization function F with constraints for end-of-year unfilled orders ( $Y_i$ ) determined as follows:

for  $i = 0$ ,  $Y_0 = \text{the current M3 end-of-year unfilled orders estimates for 1988}$

for  $i = 12 \text{ and } 24 = \text{December 1989 and December 1990}$

$$Y_i^A = Y_i^O (S_i^A / S_i^O)$$

where  $Y_i^A = \text{adjusted end-of-year 1989 and 1990 unfilled orders}$

$Y_i^O = \text{original M3 end-of-year 1989 and 1990 unfilled orders}$

$S_i^A = \text{ASM annual shipments estimate for 1989 and 1990}$

$S_i^O = \text{M3 annual shipments estimate for 1989 and 1990}$

Monthly new orders estimates are derived consistent with the benchmarked shipments and unfilled orders monthly data using the following relation.

$$X_J = S_J + (Y_J - Y_{J-1})$$

for  $J = 1 \text{ through } n$

$J = 1 = \text{January 1982}$

$J = n = \text{December 1991}$

$X_J = \text{Benchmarked New Orders}$

$S_J = \text{Benchmarked Shipments}$

$Y_J = \text{Benchmarked Unfilled Orders}$

## Appendix F. Notes on Trading Day Adjustment Methodology and Weight Patterns

---

The shipments data in the M3 survey are adjusted for calendar month variations, both length of month and number of trading days per month. The selection of these adjustment factors is based primarily on recognition of patterns contained in the data using the regression and spectral analysis capabilities of the X-11 seasonal adjustment software.

Factors are considered optimal when the daily weights assigned to the industry eliminate or diminish the peaks in the spectral plots, which are based on calendar frequencies, and lower the absolute value of the month-to-month change in the residual irregular component (I) of the data series. Several variations of the calculation

and application of these weights provided multiple versions of the irregular component values. The set of weights selected were those which realized the lowest I value. The following table contains the daily weights used for each industry.

The results of the trading day adjustment affect the historical data in the M3 survey back to 1987. For trading day weights before 1987, see Table F-1 of M3-1(90).

New orders data in this publication are implicitly trading day adjusted by using the trading day adjusted shipments as input to their derivation. The change in unfilled orders is not trading day adjusted.

(NT) Not trading day adjusted. (T) Trading day adjusted.

<sup>1</sup>The F value measures the presence of stable trading day patterns, and is the quotient of the between months' variance attributable to the trading day component and the residual variance attributable to the irregular component. Values greater than 7 indicate there is a significant trading day pattern present.

## Appendix G. Summary Measures for Evaluating the Quality of the Seasonal Adjustment of M3 Series

The measures shown in the following table were used in evaluating the current seasonal adjustment procedure. Brief descriptions of the measures follow:

The average absolute percentage change without regard to sign is the average of the absolute percentage changes between all pairs of adjacent months; it is one measure of variability.

The "O" is the average month-to-month percentage change, without regard to sign, in the original series. The "CI" is the same for the seasonally adjusted series. The "C" is the same for the cyclical component which is a smooth, flexible, moving average of the seasonally adjusted series. The "I" is the same for the irregular component, which is obtained by dividing the cyclical component into the seasonally adjusted series.

The "IC" is the average relative month-to-month change, without regard to sign, of the irregular component divided by the average relative month-to-month change, without regard to sign, of the cyclical component. It serves as an indication of the series' relative irregularity.

The measures of relative contributions of the component series to the variation in the original series can be interpreted as measures of the absolute importance of each component. The percentages shown are actually the percentages of the total variance obtained by adding up the variances of the individual components and may differ from those using the variance computed directly from the original series. The I is the irregular component, C is the trend component, and S is the seasonal component. A value of I greater than 30 usually indicates that the erratic movements in the series will significantly diminish the ability of X-11 to identify the seasonal movements in the data. Values of S less than 50 suggest that the seasonal movements are difficult to quantify.

The F value presented here measures the presence of stable seasonality. It is the quotient of two variances: (1) the between months variance, which is mainly due to seasonal, and (2) the residual variance, which is mainly due to irregular. A value of 7.0 or greater is used as an indicator of the presence of stable seasonality.

The Q value is a weighted average of 11 different quality control statistics concerned variously with the irregular movements of the series and with seasonal patterns changing too rapidly to be identifiable, particularly in recent years. A value greater than 1.2 is unacceptable. Values less than 0.8 often indicate an acceptable adjustment. With values between 0.8 and 1.2, other measures must be consulted to determine if the seasonal movement in the series can be adequately quantified by the X-11 program.

The  $SF_R$  and  $MM_c$  are diagnostics from the sliding spans tests. The  $SF_R$  measures the amount of revision in a seasonal factor for a specific observation that occurs as the specific years included in the seasonal adjustment analysis change. For example, for most series in this publication a 10-year series is examined as three 8-year spans: 1978 to 1985, 1979 to 1986, and 1980 to 1987. For the  $SF_R$ , it is considered acceptable if no more than 25 percent of the seasonal factors are revised by more than 3 percent for Q values  $\leq 0.80$ ; for Q values between 0.8 and 1.2, the  $SF_R$  should be no more than 15 percent.

The  $MM_c$  is a measure of the revision in the month-to-month percent change for specific observations, as the years included in the span are changed. It is considered acceptable if no more than 40 percent of the observations are revised by more than 3 percent.

The ratio of maximum to minimum seasonal factor gives the ratio of the largest upward adjustment to the largest downward adjustment, and therefore measures the extent of the seasonal movements estimated by the program. An NS in the last column indicates a series is not seasonally adjusted in this publication. The other columns for these series contain the measures produced in X-11 ARIMA and sliding spans runs to determine the presence of quantifiable seasonality. For series which are not seasonally adjusted in this publication, the original unadjusted values are included in both the seasonally adjusted and unadjusted totals.

Table G-1. Shipments

Industry	Average percent changes				Ratio of irregular to cyclical components (I/C)	Relative contribution to variance			F value	Q value	Percent revised		Ratio of seasonal factors	Seasonal adjustment indicator
	Original series (O)	Seasonally adjusted series (C)	Irregular component (I)	Cyclical component (C)		I	C	S			SF <sub>r</sub>	MM <sub>c</sub>
